## Spectrum Plus 2 is ready to roll

● Amstrad's design for Spectrum Plus 2 is finalised

● Machine will have only 128K Ram

● Prospects for Loki still remote

*Full details below and inside*

The design of Amstrad's £140 version of the Spectrum, the Plus 2, has now been finalised, and first units are expected to go into production at Timex's Dundee factory this summer for release in September.

The machine conforms to standard Amstrad format in that it has a 'proper' keyboard and built in data recorder but perhaps conscious that too sophisticated a machine could hit sales of Amstrad's own range the company appears to have

made few modifications apart from this.

Like its predecessor, the Spectrum Plus, the machine will have only 128K Ram, probably with the extra configured to work as a Ram disc in the same way as the Plus' extra memory is.

The machine is however likely to have joystick ports, and will maintain compatibility with previous versions of the Spectrum. It will, however, have no monitor included.

Although the layout of the keyboard conforms more to Spectrum than to Amstrad standard the machine looks like an Amstrad, not a Sinclair. Similarly this model at least is

Buyer's guide

New model reviewed

# The Edge...do you have it?

**£7-95**

*Let the good times roll!*

It's the latest craze! The most amazing 3D arcade game ever featuring 'Curvspace 3D' and a host of problems to solve as Bobby goes in search of his Brothers to bring them on home... Go on, have a ball!

**£8-95**

## The Ultimate Quest...

You are Prince Kyle accompanied by your loyal warriors in this fantastical quest for the legendary Mindstone. This is the first icon-driven graphics adventure to boast the full features of an adventure and strategy game. Bound to enter the annals as a true classic in micro adventures.

Both Bobby Bearing and Mindstone are compatible with the 48k and 128k Spectrum (iv 48k model), Commodore 64 and Amstrad versions coming... see press for details.

Have you joined The Edge Connection? Just send \$6 to become a member and get free posters and a free Fairlight T-Shirt!

◀ **HARDWARE****11 Turbo 64**

Commodore 64 owners have one of the best computes around. Unfortunately they also have the slowest disc drive. Chris Jenkins looks at a simple remedy – simply plug in this cartridge and step back in amazement.

**SOFTWARE ▶****12 Atari Desktop**

No real desktop is as tidy as that represented on the Atari ST. Duncan Evans looks at a package that simulates the clutter of the real thing, adding a clock, notepad, calculator, and sundry other executive toys.

**12 QL designs**

Save thousands of pounds with this drafting and design package from Talent. With this and a QL you don't need to buy a hugely expensive CAD terminal. Peter Worlock reports.

**Special Supplement  
Print technology**

In this week's free supplement:

i **Desktop publishing** Its this year's buzz phrase in business computer circles. But home micros can get in on the act.

iv **Laser technology** Just a short while ago, daisywheel printers were considered the bees knees but now there's a new kid in town and it leaves the old stuff for dead.

viii **Printer buyer's guide** If you're looking for a printer you'll be spoiled for choice. We feature dozens – all for less than £500.

xi **Hardware review** Chris Jenkins becomes enamoured with a small, quiet and, above all, cheap little printer for the Commodore 64/128. It's got two colours too.

**GAMES ▶****16 Reviews**

More of the latest releases come under scrutiny, including *Dragonhold* on the QL, *Hyperforce* on the C16, *Master of Magic* on the Spectrum, *Buster*

*Block on the Amstrad*, and *Bump, Set, Spike* on the C64.

# Spectrum's £600 PC

SPECTRUM GROUP is to launch a £600 IBM PC clone next week, and as Acorn also prepares a badged version of Olivetti's M19 it looks like becoming open season for the Amstrad PC.

The Spectrum machine is a Far Eastern import, and sports 640K Ram, MSDOS and GWBasic and twin 5¼ inch disc drives. At the price, and this specification, the Spectrum machine could beat the Amstrad on price, and has the added advantage of having the IBM standard operating system, MSDOS, bundled. Amstrad's machine will instead have DOS Plus, the PC operating system from Digital Research, included instead.

Acorn's version of the Olivetti M19 looks like being less of a competitor on price than the Spectrum PC. Olivetti prices the M19 high by today's standards, and although selling it through Acorn would give

the opportunity to break into the UK educational market it's unlikely to allow Acorn, its British subsidiary, to undercut it.

The machine also lacks PC standard expansion slots.

## Alligata offers dream prize

Alligata Software is organising a "Prize of Your Dreams" summer promotion for its programs. Anyone buying an Alligata tape or disc up to 30 September should receive an entry form for Alligata's competition draw, the prize being goods of your choice to the value of £500.

The form covers current stock and Alligata's summer releases, which include Meltdown for the Amstrad, Pub Games for the Spectrum, 64 and Amstrad, and Trap, Tony Crowther's new game for the 64.

# Atari special offer on 520

Atari is to sell its 520STM in four different cost-cutting bundles during June and July, the basic pack consists of 520 and disc drive reduced from £548 to £449, while pack two also includes a monochrome monitor, and costs £699, as opposed to a normal price of £846.

Pack three consists of 520, twin drives and colour monitor

and is reduced from £986 to £849, while pack four offers 520, twin drives, monochrome monitor and dot matrix printer for £849. This is reduced from £1,045.

Announcing the offer Atari UK marketing manager Rob Harding said that the packages would appeal to a broad base of users.

## Micronet puts its toe in MUD

MICRONET is to launch Shades, its own version of MUD, in August. Shades will cost 99p per hour, and will have no registration fee apart from Micronet membership.

Micronet says it has received many requests for a MUD variant, but had problems

finding a system that could cope with large numbers of users and would run in viewdata format. These problems have now been cracked, and according to technical director Mike Brown Shades exploits the positive features of viewdata, including colour.

## AMS launches Magazine Maker digitiser bundle

AMS has combined its AMX Pagemaker and AMX Video digitiser to produce a package called AMX Magazine Maker. The digitiser allows any video that produces a composite signal to take images from a camera or TV. These are then converted to the Amstrad graphics screen, and can be used within

Pagemaker. The combined packages cost £129.95. The complete package can be used to produce magazine-like layouts.

Details from Advanced Memory Systems, 168-70 Wilderspool Causeway, Warrington WA4 6QA (0925 4134501/2/3).

RCS Microsystems' new Zero-One-Q single board computer sports 20 character display, 8K of battery-backed Ram and 32K Rom. I/O includes RS232 and 42 parallel lines. Details on 01-979 2204.

## New Sinclair Spectrum is ready for production

◀ Continued from page 1

a product of Amstrad's engineers rather than Sinclair's design team. It doesn't use the Astron cards Sinclair had planned for the Pandora, and the technology of Loki, Sinclair's advanced version of the Spectrum, remains firmly on the shelf.

The machine's interfacing is, however, likely to remain a problem for Amstrad, as the Spectrum 128 has both an RS232 and midi, albeit with

non-standard plugs, while its "rivals" the Amstrad 464 and 6128 do not. Alan Sugar maintains that the Plus 2 will not signal the death of the 464, but if this is to be the case Amstrad may be forced to limit the new Spectrum's specifications to keep it firmly in the games market.

Amstrad's main professed interest in Sinclair was for the Spectrum's games capability, but a games console launch is also a possibility.

# PCs still pending at the Amstrad show

The latest Amstrad show, held at London's Novotel last week, suffered from a severe case of PC starvation. As expected the Amstrad IBM PC compatible failed to show, and to make matters worse the MSDOS upgrade from Vortex appeared to have joined it in Limbo. Vortex, however, confirms that its machine is ready, and UK distributor Screens expects delivery in the next eight weeks. Amstrad remains mum about its own PC, but it appears that some of the larger dealers are currently in negotiation to take delivery of the machine, so the launch can't be too far off. Launches this time round were however limited to an Amstrad modem, selling at £99.95. This is a rebadged version of the Pace Nightingale, which retails for a sum not unadjacent to £99.95.

The upgrade Screens intends to distribute is produced by German manufacturer Vor-

tex, and is based on the Intel 8086 processor (the faster version of the 8088 used in IBM's PC). It will come with 512K Ram and Digital Research's DOS Plus operating system bundled, and the latter will include hooks allowing it to run DR's Macintosh-like Gem graphics environment.

Screens isn't willing to fix a price for the upgrade until the first shipments arrive, but reckons it will be around £400-500. The company also unveiled an enhanced version of Vortex's expansion board for the 464 - this should also arrive in the next couple of months.

Add-on supplier Timalic had been blessed with some new arrivals, although spokesman Nick Young claimed that the hard disc, although ready, had blown up twice in prototype the other day and therefore couldn't be present. He did however promise that the non-incandescent production ver-

sions would be very cheap. In default of this the company's main exhibits were the "Bigdisk" duo - one megabyte (unformatted) 5 $\frac{1}{4}$  inch discs for the 8256 (£209) and 6128 (£249). Both of these work in conjunction with the company's Camelion software program that will allow Amstrads to read and write MSDOS format discs.

Former Spectrum specialist DK Tronics was offering a range of Amstrad 464 expansion devices, including speech synthesiser, Ram expansions, light pen and 256K silicon disc. The latter retails at £99.95, the same price as 256K configured as Ram.

EMA had a combined hardware/software music package on display. This consists of Miditrack Performer software and midi interface, the complete package costing £129.85 for 664/6128 version and £139.85 for 464. The system is

"Of course, the cardboard goes limp in hot weather..."

claimed to work with any midi instrument.

New Star Software's William Poel made a more overt attempt to enliven proceedings by claiming that he would unveil a low-cost PCW8256/8512 lookalike at the show. Desperate newshounds reporting to the stand were aggrieved to discover that the "lookalike" was a cardboard cut-out model, a number of which he'd had printed up for the show.

To prove we can take a joke we'd just like to point out that New Star is selling dBase II at £395, while First Software retails it at £119.95...

## Budget game prices drop down to 99p

Budget games manufacturer Central Solutions has slashed the price of its range to 99p. According to a Central spokesman the company is reacting to the current stampede into budget titles, which has seen Firebird increasing its profile and the likes of US Gold and Mikro-Gem joining the fray.

Central's price cut also affects its ten game packs, which

were priced at £5.95 and £6.95, and are reduced to £4.95 each. The company says that it can still make a profit on these prices, and feels the cuts should increase its market share drastically. It intends to maintain the low prices, and re-released 12 back-to-back adventure games tapes at 99p each at the beginning of this week.

## New games house

Andrew Wright has left Activision to form a new company, Thalamus, which will be the games software arm of Newsfield, publisher of Zzap and Crash. According to Wright Islington-based Thalamus is a separate company within the Newsfield group, and will be managed independently.

Wright intends to release

four titles by Christmas, one of them being a tie-in, and products, he says, will be of a high quality. "You won't ever see us producing a £1.99 game, adding a poster and a sticker and putting it out at £9.99," he says. Although he claims to have products ready he doesn't intend to give any details until later in the year.

**THE MAN** in the photo is Vick Pearce, developer of the Commel-X package for the Amstrad PCW. The package consists of modem that supports Email and viewdata, dual serial and Centronics interface, Comm+ software and an Easylink subscription form. It costs £286.35, and is claimed to be incredibly easy to use. But if this is the case, why's he trying to stick that interface there?

Telephone engineers should phone him on 0992 541118.

## First plans expanded range

First Software and Publishing, which recently announced an Amstrad PCW8256/512 version of Ashton-Tate's dBase II at £119.95, is also to sell the program on the Commodore 128 and Talung Einstein. But according to First boss Sarah Gathraith the company has no plans to release the program on the Amstrad PC when it is launched.

First has an exclusive UK licence from Ashton-Tate to market CP/M versions of dBase at the current low price, but the latter company is highly unlikely to be interested in cutting the cost of its IBM PC products.

First will, however, be launching a £49 integrated software package for the PC in the summer. This will consist of spreadsheet, word processor, graphics, time manager, diary planner and forecaster, and will effectively be a re-issue of an integrated suite previously marketed by Peachtree.

## Product News

### Saga bundles WP program

Saga Systems is to bundle its new word processor, The Last Word, with its Saga Elite and 2001 Spectrum add-on keyboards. In addition the keyboards will come with an offer of £20 discount on the Centronics GLP printer.

The Last Word sells on its own for £13.95, and features an

80 character display, full on-screen help facility, calculator and a wide range of printer and disc drive options. The normal price of the Centronics GLP, which has both Centronics and RS232 interfaces, NLO mode and top speed of 120 characters per second, normally costs £199.95. The Saga Elite now costs £69.95, while the 2001, which has an infra-red connector, costs £119.95.

Details from Saga Systems, 2 Eve Road, Woking, Surrey GU21 4JT (04862 22977).

### Filming cabinet for 3 inch discs

Micro Interface is now supplying the 3 inch Filming Cabinet, a ten disc box that fans the discs out neatly when opened. It costs £5.95.

Details from Micro Interface, 84 Talbot Road, London N6 4RA (01-340 0310).

### Build your own Amstrad PCW8512

CITADEL is offering an upgrade kit allowing you to convert a PCW8256 into an 8512 for

£189.95. This consists of a Ram expansion and second 3 inch drive, both of which are fitted internally.

Details from Citadel Products, 110 High Street, Edgware, Middx HA8 7EP (01-951 1848).

### Epson issues a technical manual

Epson is to sell a comprehensive technical support manual

covering both its printer and computer products. The manual gives detailed specifications on the products, including news on the latest Rom upgrades, and is intended to provide users with full information on their machines. The manual comes in eight separate sections at £10-12 each.

Details from Epson UK, Dorland House, 388 High Road, Wembley, Middx HA9 6HUH (01-902 8892).

## Diary Dates

### JUNE

#### 24-26 June Computer '86

G-Mex Exhibition Centre, Manchester.

**Details:** Business and industry computer show. This exhibition was formerly known as the Northern Computer Show.

**Price:** Free entry by business registration.

**Organiser:** Reed Exhibitions, 01-643 8040.

#### 26 June Bracknell Computer Show

Coopers Hill Community Centre, Bracknell, Berks.

**Details:** Software and hardware for the Dragon, Commodore C16, Plus 4 and Vic.

**Price:** £1 adults, children and QAPs 50p.

**Organiser:** John Penn, 04203 5970.

### JULY

16-18 July

### PC User Show

Olympia, London

**Details:** Hardware and software for IBM machines and their compatibles.

**Organiser:** EMAP, 01-608 1161.

### 24-27 July

#### Acorn User Exhibition

Barbican Centre, London

**Details:** Hardware, software and peripherals for the Electron, BBC micro and Master machines.

Trade only 10am-1pm on 24 July.

**Price:** £3 adults, £2 children, 10p discount for advance sales.

**Organiser:** Editionscheme, 01-349 4667.

### SEPTEMBER

#### 3-7 September

#### Personal Computer World Show

Olympia, London

**Details:** Software and hardware for home, educational and business computer users. For the first time this year the show is to be organised in three separate halls - business, games

and education.

**Price:** £2.

**Organiser:** Montibuild, 01-487 5831.

#### 8th September Official Commodore Computer Show

UMIST, Manchester

**Details:** A wide range of Commodore hardware, software and peripherals. Formerly the Commodore Horizons show.

**Price:** £3 adults, £2 children, £1 discount for advance booking.

**Organiser:** Database Publications, 061-456 8383.

#### 26-28 September Electron and BBC Micro User Show

UMIST, Manchester

**Details:** Software, hardware and peripherals for the Electron, BBC micro and Master machines. Produced by Acorn.

**Price:** £3 adults, £2 children, £1 discount for advance booking.

**Organiser:** Database Publications, 061-456 8383.

### OCTOBER

#### 30-31 October

#### Hampshire Computer Fair

Guildhall, Southampton

**Details:** Business computers and communications.

**Price:** Free entry by business registration.

**Organiser:** Testwood Exhibitions, 0703 31557.

### NOVEMBER

#### 22 November

#### The 6809 Christmas Show

Royal Horticultural Hall, Westminster, London

**Details:** Dragon software and peripherals.

**Price:**

**Organiser:** Microdeal, 0726 6820.

Prices, dates and venues of shows can vary, and you are therefore strongly advised to check with the show organiser before attending. *Popular Computing Weekly* cannot accept responsibility for any alterations to show arrangements made by the organiser.

## Satisfaction

**T**hank you for publishing the letter from Chris Moore in *Popular*, May 22. I too am an Enterprise owner and, as usual, I was reading through the letters in a rather smug way.

I own a computer not only with an "ultimate Basic", but a Basic that works (cf Atari). I also have had no problems getting a response from Enterprise Computers, almost always by return of post, or getting the machine fixed (cf Amstrad and Sinclair).

Okay, I admit it's not perfect. Having used it for on average four hours a day for about four months, it broke down. I put it back in its box and posted it for repair on Monday afternoon. On Saturday morning, it was back on my desk - the same week!

Sometimes, as a minority computer owner, I get the feeling I don't exist - and you may bear in mind that we probably own unfashionable computers because we are interested in computing not fashion. This probably means we are more likely to buy computer journals.

Of course most of the interesting listings you get are for utilities, something you are less likely to receive from Enterprise owners as this machine comes equipped with most of the requirements for programming.

Mishra  
Cambridge

## Upgrade woes

**I**n January I sent my 48K Spectrum to Sinclair Research to have it upgraded to a Spectrum Plus. My computer was returned four weeks later, but unfortunately on testing it I

## QL in print

**I** have just bought a Centronics GLP printer for my QL. It's an excellent printer, ideal for the machine. For £160 you get tractor and friction feed, serial and parallel interfaces, a host of typefaces, a good NLQ and complete compatibility with the QL and its bundled software (including *Ease*). The ribbon is a Brother M1009 and Commodore MPS803 type, so is easy to obtain. However the state of euphoria I'm now in was only reached after two printers and several wasted days. To save others from similar frustration I offer the following information:

There are in fact three versions of the GLP with different firmware; the original IBM, an EPSON RX80 equivalent and the QL version. The manual with each is for the IBM version and in my case no extra information was given about the changes in the others.

If you use a centronics interface you should be able to use any of the variants. The problem arises from the QL's need for a 8-bit and no parity serial setting not provided on the IBM version.

The QL version's character set one is 100% compatible with the QL and codes above 192 (decimal) are non-

printing. Character set two repeats above 127. The DIL switches are slightly different as follows:

Switch	Function	QL	QL
2-2	Line Feed Spacing	1-8	1-6
1-6	Communications type		
1-6	Serial, odd parity		
2-2	Serial, odd parity		
2-2	Serial, odd parity		
2-2	Serial, odd parity		

The Epson version has international character sets and an italic typeface. The switch settings are completely different and I can't offer much advice on this. Switch 2-2 is the NLQ switch and the communications switches are possibly as above.

Micro Anvika, of Tottenham Court Road, London, sold me the printer with the switches set for the QL and a phone call to Centronics revealed the switch functions.

My only criticisms of an otherwise perfect accompaniment to the QL are, apart from the terrible documentation, that thick single sheet paper gets caught on the lid which necessitates its frequent removal. Also the extra QL characters do not print in NLQ, rather they appear as emphasized. Graphics characters or an italic mode could surely have been added to the QL version.

Steve Lee  
Woodford Green  
Essex

loose in the computer casing, and the PCB was held down by only two screws.

I was going to return it again when I learnt of the Amstrad/Sinclair deal.

Please could you advise me what to do with my once perfect Spectrum which lasted three and a half years without a single fault, and now seems to be finished by Sinclair's repairs department.

Peter Ball  
Preston

**Try writing to SRL, which is what remains of Sinclair Research is now called, at Milton Hall, Milton, Cambridge, CB4 4AE (0223 862661), explaining your problems and asking for advice.**

## Commodore clubs

**I** am starting a couple of user groups with a friend for Commodore 64 and C16 owners. We will accept inquiries from anywhere and we will reply instantly. There will be no membership fee.

The user groups will be aimed at swapping hints and tips for software, and writing software listings. Anyone wanting to join the C64 group should write to me at the address below. The address for the C16 group is David Hill, Commodore User Group, 61 Madeley Road, Havercroft, nr Wakefield, West Yorkshire. Please could inquire enclose an SAE for reply.

## Back to Basic

**I** have read with interest the growing debate that seems

discovered that it had only 16K of memory, so I spent £3.60 on postage and returned it to Sinclair.

Two weeks later my computer was returned, but this time when I switched it on the screen remained blank and refused to display the copyright

message. So I spent another £3.60 and returned it again, with a covering letter asking for a refund of postage costs.

Two weeks later my Spectrum came back. This time, the screen was still blank, the heat sink was lying separately in the box, the 'loudspeaker' was

# Puzzle

## Puzzle No 213

Professor Otto Hex was responsible for ordering the new paving slabs for the college quadrangle. Unfortunately, due to his absent-mindedness, he has mislaid the paper on which he had written the details required.

However, he does remember the following:

- The quadrangle, which is nearly but not exactly square, is rectangular in shape.
- The length and width are both an exact number of feet, and the area (in square feet) is a five-digit number ending with a '4'.
- This five-digit number contains within it a run of three consecutive digits in ascending numerical order.

(iv) The total area is also an exact number of square yards.

What is the smallest that the quadrangle can be? (Note that by 'almost square' we mean that the longer side is no greater than 10% more than the smaller).

## Solution to Puzzle 208

The first time that there is an equal number of both calls for counts greater than one hundred is on the count '153'. On this call 'Fizz' and 'Buzz' will both have been called forty-one times.

## Winner of Puzzle No 206

This week the winner is A.M. Scott of Grange-mouth, Stirlingshire, who will be receiving £10.

```

10 FIZZ=0:BUZZ=0
20 FOR I=1
30 IF I=3 THEN FIZZ=FIZZ+1
40 IF I=5 THEN BUZZ=BUZZ+1

Tel: (091) 414 4611

to have started in your magazine, lately, concerning the usefulness of the Basic supplied with the Atari ST range.

As an owner of three different computer systems and my wife owning a fourth I would like to put forward a few observations. Of all of the professional software we have, on all the systems, I would say that less than five of the programs are written in Basic. I would conclude from this that professional programmers don't see Basic as a language to be used for saleable applications software.

This, I think, does not mean that Basic is of no use but that other languages are just more suitable. I would suggest, therefore, that if you have bought the ST with the intention of producing some application that you feel you must write yourself and intend to use in some important way then you should be using the best tool for the job.

In fact the more I think about this debate the more it highlights one of the fundamental problems of the computer industry. Just why do people buy home computers? The an-

swers to this question are very unclear. I bought my first computer purely out of curiosity as to what they were all about. I have since progressed to a machine that I think fills my needs well. It has taken me three computers, however, before I realised what I even wanted from one: proper word processing, a fascination with computer graphics and an interest in the mathematics of music has led me to the ST. I realize there are many more uses. In my opinion very few are actually useful in the home. Of my three reasons only the word processing is of any real use to me.

I have had a great deal of fun and pleasure programming my computers in various languages. I even consider myself to be quite advanced at it. It is ironically this knowledge though that makes me realise that if I wish to produce anything as advanced as a professionally produced piece of software I would have to devote as much time as they do to do it justly.

Having already got a full time job I can't afford to spend six months to a year, eight

hours a day, achieving something I can go and buy off the shelf straight away.

This doesn't prevent me from continuing to dabble, just from a hobbying point of view, in programming. When seen in this light I think that ST Basic meets its requirements adequately. It might have been nice if it exceeded its requirements brilliantly but I shall not miss it if it doesn't.

It seems a gross overreaction to me to claim that the machine itself is flawed because its freely given away Basic isn't as good as some people might have liked.

## Blasting out

You may have noticed that there are not a lot of tape-based magazines and fanzines around these days, so I would like to inform you of my own magazine called *Blast It*.

This is a monthly mag. To receive it, the readers can do either of the following: a) Send us a blank tape of C15 size or

more plus 30 pence to cover production costs and postage back, or b) Send us 90p to cover the above plus the cost of a tape.

## C128 tweak

I am writing to Inform Commodore 128 owners about some incompatibility problems they may have experienced when trying to load games in 64 mode.

Most programs I have found do not load, eg, *Mr Do*, *PC Fuzz*, can be loaded by simply pressing the *Caps Lock* key down and then loading as normal.

So far this works for all Anlog titles, *Mr Do* and *Goonies*.

Also you might try switching to lower case in 64 mode and pressing *Caps Lock* for an interesting effect

## High speed

**O** I all the problems inherent in the Commodore computer systems, the one which causes most angst is certainly the speed of the disc drive. The 1541, while reliable and "intelligent", uses a serial system which is designed for economy rather than speed. As a result, Commodore 64 owners tend to go pale when they see the speed of, say, BBC disc systems.

There have been many attempts to speed up the Commodore DOS, ranging from cartridge-based operating systems such as Quick-Disc, to software packages which require you to produce "fast-load" back-up copies of your software. One of the latest attempts is the Cockroach Turbo-Rom.

Cockroach's previous attempt to speed up CBM disc operations was a software-based system. This idea consists of a single 8517 Rom chip in a socket, attached to a toggle switch. Fitted instead of the normal CBM 64 or SX-64 kernal, it claims to be able to speed up loading, saving and verifying times by a factor of five. There's a price to pay for the extra routines; all the cassette and RS-232 code has to be left out to allow space for the new kernal. Fortunately, the toggle switch allows you to switch off the Cockroach Rom and return to

the original kernal, a copy of which is stored in the Rom.

Installation is straightforward and should present no problems. The toggle switch can be mounted permanently, or left protruding from the cassette port. Syntax for all routines is largely similar to standard syntax; in many cases abbreviated. However, there are some useful additions, for instance, on saving, the Cockroach Rom checks to see whether there is sufficient space on the disc to save the program first rather than just ploughing ahead and coming up with an error message if it runs out of blocks.

The Save With Replace problem, which

has been the subject of great debate within the user groups, has also been circumvented - the Cockroach Rom always scratches old files before saving new ones in the same name. There's also a screen dump feature, although this is disabled if hi-res or multicolour screens are being used.

Lastly, the Turbo-Rom contains many disc utility features which are familiar from utility cartridges such as *The Final Cartridge* and *Robtek's Turbo*, read disc error channel, display directory, initialise disc, validate disc, rename file, fast format and so on. Most of these commands are single characters preceded by an ampersand. For heavy disc users, or multiple disc-drive owners who wish to renumber devices without making hardware changes, the Turbo-Rom would seem a worthwhile idea. Since it can be switched off at any time, there's no worry that it will interfere with your software (although apparently some programs, such as *Easy Script*, have loading routines which are incompatible with the Turbo-Rom). Well worth considering.

# An irresistible combination

Computer topics have their day – artificial intelligence, integrated business packages, real-time control – but computer graphics goes on forever. In the past graphics terminals have tended to be expensive but now the QL is getting in on the act, thanks to the cutely-named *TechniQL* package from Talent.

The features of the software, coupled with the recent bargain price of the QL, make the combination irresistible for anyone with a need for a drafting and design package at a budget price.

*TechniQL* features full colour 65,000-dot resolution, menu and keyboard control, and just about everything else you could want.

Obviously the theoretical size of documents is much larger than the screen display and any printer capability, so the screen acts as a window on to the full document (in fact you'll run out of memory before you get up to the limits of the

software)

Printouts can be handled as multiple sheets which can then be stuck together.

The software is very simple to use. You either select the required item from menus (ESC gets you out of fumble-fingered selections) or direct operations with a series of two-letter mnemonics.

The drawing lines, boxes, circles, and filling shapes is

done, at present, with the cursor keys or a joystick. You can create your design on any or all of eight layers which can be thought of as transparent overlays to be added or removed from the work in progress.

This allows you to build-up a design in stages. Print-outs can selectively include or ignore various layers.

Other features include pan-

ning, zoom in and out, on-screen rulers and multiple cells. You can think of cells as small designs which can be created, edited and stored for use in other, larger designs. This feature allows you to create a library of 'building blocks' such as map symbols, machine components, circuit board sub-designs etc.

At present *TechniQL* has some limitations. It doesn't support 3D graphics and transformations, and it will only drive an Epson-compatible dot matrix printer.

While this sort of output is fine for certain applications, serious users will almost certainly want output to a plotter, and input by keyboard or joystick leaves a lot to be desired. Therefore support for a mouse or graphics tablet would be welcome.

Talent is aware of these problems, and is promising continued development of the package to cover these areas.

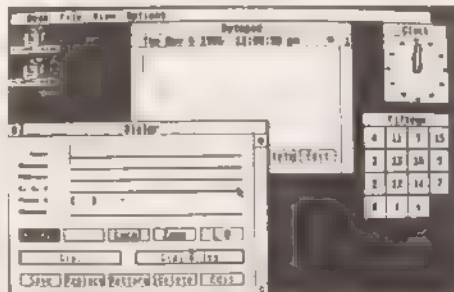

So who will use *TechniQL*? Anyone wanting two-dimensional design facilities at a low cost.

A QL decent dot matrix printer and *TechniQL* comes in at £500. Quite simply, there's nothing else on the market to touch this combination.

Duncan Evans

## Executive toys on the ST

**Program:** *Cornerman* **Micro:** Atari ST  
**Price:** £29.95 **Supplier:** Microdeal, Box 68, St Austell, Cornwall PL25 4YB

*Cornerman* for the Atari ST series is a multi-function accessory for use on the GEM desktop. Written by the American company MichTron, it has been published in the UK by Microdeal and retails at £29.95.

There are eight accessories available although the value of four of them is open to question. What you get for your 30 quid then, is an ASCII table, calculator, notepad, dialler and phone log, sliding block puzzle, clock and DOS window.

In order to utilise *Cornerman*, all the files on the disc supplied must be copied across on to your start-up disc, or wherever you keep your

desktop accessories. If you have a 520ST and TOS is still on disc then don't bother to buy *Cornerman* as there isn't enough memory left to run anything but the smallest of programs.

The ASCII table simply gives a list of the ST character set plus codes. This is, of course, just what you'd buy a desktop program for.

Equally worthless are the Clock feature and the sliding block puzzle. The DOS window function allows you to exit GEM temporarily and call up a program for manipulating TOS, before returning to the GEM system.

The calculator is useful,

mainly because it offers facilities not normally found on the push-button variety. You can work in decimal, binary, octal and Hexadecimal. Upon these numbers you can perform Boolean logic if you so desire, as well as displaying word values (16 bit), double and quad word values.

The notepad accessory enables you to store short notes, along with time and date, on disc for later reference.

And so to the dialler and phone log accessories, and to problems. Unfortunately it's set up for the US telephone service and you must have a modem connected. Enquiries to Microdeal revealed that al-

though you can reconfigure the dialling format, you can't get it to deal with the UK telephone system.

This makes it completely useless. Microdeal is now looking into this, but don't hold your breath for a possible conversion.

As the program stands in its current format, in essence you're paying £30 for a calculator and a notepad. The program looks good, but flatters to deceive, and at this price is really not recommended.

Duncan Evans

# DOCTOR WHO AND THE MINES OF TERROR — A Massive Graphic Adventure with 4-way Panoramic Scrolling. (86% ZZAP REVIEW)

The Story so far . . .

The Doctor has at last cracked the code to the safe and obtained the Pass Card thereby giving him access to all areas of the Rijan Complex, though no immunity against the Master and his Robot Controllers. He continues his search for the TIRU plans and seeks further ways to disrupt the mining and processing of Heatonite.

**OBJECTIVES/SCORING.** The main task is to escape with the Memory Capsule (containing the TIRU plans). Bonus points awarded for shortest possible time (assuming no use of 'saved-game' option), Stopping the Factory (two options), Visiting each of 8 CSC's, Escaping in the Tardis and Taking Splinx and the Crystal.

*The DOCTOR continues his quest . . .*

Just above the LH monorail he climbs a series of levels to the Greenhouse. Avoiding controllers he finds a bucket of Chemicals and a Cloth. Nearby is a tank of chemicals of a different colour! Further up is another CSC and also the Anti-Gravity map. Full pockets are now causing him some difficult decisions on which objects to retain. He finds an airlocked exit and discovers why he should have kept the Oxygen handy!

**NEXT EPISODE — Into the Control Room . . .**

**Dynamite . . . Escape Pods . . . PCB'S . . .**

## DOCTOR WHO

# THE WRITE STUFF

- Practical Amstrad Word Processing is a complete self tutor for anyone trying to get to grips with Locoscript on the Amstrad PCW 8256 and 8512 word processors.

- The self contained sessions in the book lead step by step through the concepts behind practical word processing and the use of the powerful Locoscript facilities. Each session concentrates on one or two major features of Locoscript, and programmed exercises show how those features are incorporated into everyday work. The areas covered by the sessions include not only the ways to improve the presentation of documents, but working methods which use Locoscript's file groupings and layouts and templates to dramatically cut the time needed to prepare a wide range of standard documents and forms.

# Through the jungle

Richard Hare examines the friendly, fervent atmosphere of Compunet

It is a strange and sorry fact that only a small percentage of Commodore 64 owners have access to, or have even seen the Compunet database.

Those that do have the Compunet modem have experienced some of the benefits: talking to fellow users, discount prices on major software houses' programs, a cornucopia of free user software, music and graphics plus the opportunity to market your own programs on Cnet.

Compunet is rare among British databases, since the greater part of its content is created by the users themselves.

The network can basically be divided into two areas: the first section comprises mainly of commercial and Compunet's official software, the Compunet editorial, MUD and so on. The other area is reserved for programs, graphics, music, clubs, gossip columns, etc. put up on to the system by users via their modems. Aply named "The Jungle" this section covers a vast area of Compunet and it would take you the best part of the day to go through it all.

## Exciting aspect

Constant change is an exciting aspect of The Jungle and there is something new to see every day. The quality of The Jungle material is remarkably high and it is quite stunning how many talented programmers, graphic artists and musicians there are on Cnet. Just recently two 'netters, aka Stoa and Tim, programmed an animated representation of a concert to accompany the tune from Firebird's game *Thrust*, with full co-operation from the composer, Rob Hubbard (Rob is a Cnet subscriber and all of his music is available on the system free of charge).

Sport Aid

Uploading a freebie like Stoa and Tim's may seem a pointless exercise, but this could not be further from the truth. Apart from improving your standards in whichever field of computing you may pursue,

uploading your work on the 'net could result in your talent being realised by thousands around Britain, including perhaps several software houses.

This is exactly what happened to Bob Stevenson (I.D. RS4) and Doug Hare (MACH81) who have both uploaded graphics and programs on Cnet and as a result a lot of their work has graced the pages of various magazines. Recently they have been working with Activision on a new project and several other companies are interested in signing them up to write software.

## Electronic mail

Working as a team Doug and Bob have now adopted the business name Kinetic Design, although many refer to them as Jocksoft owing to their Scottish origins! Communicating with other people is one of

Jane's Place

the most rewarding aspects of Compunet. One method of contacting another user is simply to send them a message with the mailing facility. Once you have typed your letter using the inbuilt editor program (low resolution graphics may be included) you can send off your message to another user which they receive instantly. The amount of mail you receive usually varies directly to the number of people you get to know on Cnet, so your mailbox is likely to be a bit empty during the initial days.

When you connect to Cnet a small pillar box indicates that you have mail and if you receive mail while on line you are informed of this at the top of the current directory you are on. Compunet mail is always a welcoming sight when you log-on (perhaps because you know it won't be a bill), especially so on your birthday, or at Christmas when

you may receive a few electronic greeting cards!

However, communication between users need not be limited to mail correspon-

Thrust by Stoa and Tim

dence. At a recent Commodore show held at the Novotel, crowds of interested people surrounded the Compunet stand. The people who visited the stand would probably have seen Cnet's new scrolling chat system, Party-Line. Basically Party-Line enables you to converse with several users at a time.

## Team spirit

Chatting on Party-Line is very similar to using a CB Audio and indeed many users have adopted a special dialect whilst speaking on Party-Line! Late night/early morning chats are usually crowded and al-

Jungle Eye by Rob Stevenson

around half past one a few weeks ago Jeff "Yakus" Minter, Tony "Ralt" Crowther and Archer (no alias) MacLean were among the people chatting on Party-Line.

Party-Line is a very fast system which is well presented and incorporates several useful commands. Its predecessor, Chat-On-Line, is slower to use, but can still be a hive of activity when it picks up the pace.

In this article I've tried to give a brief insight into a few aspects of Compunet which I particularly enjoy.

I think, however, that Cnet's greatest strength is the team spirit, which always seems to be present - a sort of friendly, fervent atmosphere.

## On the beach

A great opportunity to play volleyball without the attendant sweat and strain. *Bump Set Spike* is one of the best sports simulations it has been my pleasure to play. Not, I hasten to add, that it has the graphic sophistication of a *Summer Games*; but, unlike that compilation of joystick-wagging exercises, *Bump Set Spike* is great fun.

The game, which features selectable Rob Hubbard music (get down!) or sound effects, can be played on either indoor or beach backgrounds. I found the indoor court better, because the ball sometimes gets lost among the seaweed on the beach. There are nine difficulty

levels, which affect the speed of the ball and the amount of "bounce". The faster levels are a lot more fun, since very good rallies can be built up.

Each team features two players, and you can select which is under joystick control by hitting the fire button. According to whether you are in an offensive or defensive mode, the fire button can also be used to control the hit power, diving, and the "spike" move - batting the ball downwards over the net rather than hitting it up into the air. The position where the ball will land is marked by a fast-moving cross, and you must position your player in the right place to make an accurate return. I found

it a bit hard to master the art of diagonal shots, but it came to me in the end.

One or two player options, cheeky little speech-bubbles and an overall combination of great gameplay and whacky details make *Bump Set Spike* one of the most fun games I've

seen for months.

Chris Jenkins

**Program** *Bump Set Spike*

## The big bang

On the back of this simulation of contemporary combat in Europe's instruction booklet it says of the events portrayed, 'They must never be allowed to happen'. On this evidence it is doubly true because though Nato only has to survive for 15 days before Warsaw Pact supplies run out, lasting even that long seems almost impossible. In such circumstances chemical and even nuclear strikes seem the only option.

*Theatre Europe* is a direct descendant of the SPI style board wargame, based on masses of research and with a heart of hard facts. The sense

power is allocated to reconnaissance, air superiority, interdiction and counter air, while the special missions include those all important chemical and nuclear options - though using these can result in the end of civilisation and a generally low rating as a general!

There is also a third, optional section, the action screen which contains an arcade game to modify combat bonuses depending how well you do on it. It's obviously been included to try and tempt people who've not wargamed before but I don't think that many hard core computer commanders will want it.

The program runs incredibly smoothly and the accompanying booklet is packed with facts and carries a persuasive moral. My one reservation about the game, other than the action screen which can be ignored, is that the play balance is wrong. As a two player game the East may be less dauntingly omnipotent, but with the Spectrum in charge the Red Army all we can do is paint our windows white and wait for the big bang!

Paul Svyacsky

**Program** *Theatre Europe*  
**Micro** Spectrum 48K **Price** £9.95 **Supplier** PSS, 452 Stoney Stanton Rd., Coventry CV6 5DG

of the hexagonal grid is banished by brilliantly smooth gameplay though. The map command screen is cursor controlled, with information on units appearing immediately. This screen also serves for supply purposes at the end of each round; a vital consideration because armies without equipment can't attack.

The other major screen is for air and special missions. Air

## Warrior of the future

Well, guess what folks? Adventure Soft Ltd (formerly Adventure International) have finally released their first adventure under their new name and guess what else? It's great.

The plot may not be very original, but then what is nowadays? Nevertheless, where the originality of the story leaves a lot to be desired, the playability of the game more than compensates.

Adopting the role of a courageous, resourceful warrior of the future, trained in all the martial arts. Your task - to infiltrate the mighty Arcadian Empire, find agents of SAROS (Search and Research of Space) and glean from them secret codes, thus enabling you to defeat the queen computer which (didn't you just know) controls the minds of the Arcadian troops.

Disguised as a merchant, you must travel to different planets before you finally find all the various parts of the code needed. You do this by travelling in the Caydia, your own custom built spaceship, complete with cleaning droids, Hcap rations, laser sword (come back Luke Skywalker) and other essential items you will need for your quest. One very nice touch was the way

certain objects are actually written into the location descriptions, so my advice is to read and examine everything carefully.

The version I played was text only (BBC & Electron) but, being a purist adventurer at heart, this suited me fine; however, the Spectrum graphics are superb and for once do seem to add something to the game.

As a parting shot I would like to congratulate Mike Woodruff and Co for producing an excellent adventure and I look forward to seeing their next release entitled *Temple of Terror*. Meanwhile, expect CBM64 and Amstrad versions of *Rebel Planet* soon.

## Addictive romp

**M**astertronic are really coming up with some good software now, and Richard Darling, author of the latest offering *Master of Magic*, has come up with another pleasant surprise.

Your character has been dragged beneath the surface of a dark pool by the hand of Thelric, the M of M, who plunges you into a strange mystical world of Magic and Evil. Ho-hum, another Sunday afternoon in the country! But he has plunged you because he wants you, yes you, to retrieve the lost Amulet of Immortality, no less. But this is just window-dressing for the game proper, which involves your

character in plenty of monster-bashing and scroll- and potion-getting.

The screen is divided into four main windows. At screen top-left is a very small plan-view of your immediate surroundings, a line-of-sight view that opens out realistically as you round a corner or enter a room to show the inhabitants or objects. At the bottom of the screen is an information window showing a graphic representation of the monster at the current location as well as other details such as adjacent doors and staircases. These graphics are very colourful and detailed, which is just as well, as those in the plan-view are

merely character-sized, with you merely a square blob.

The largest window, top right, displays a scrolling commentary on what is happening to you, with a read-out of game-time and barometers for your status. The final window displays a number of options which change depending on

prevailing conditions. Nearly always present is the *Run* option, allowing you to get clear of monsters and other threats - but you may also be offered *Examine*, *Pick up*, *Drop*, ask for an *Inventory* and other such adventure-like commands. You may also *Open* and *Close* doors as they are chanced upon - there are also the *Cast* and *Attack* options, each of which lead to a sub-menu of spells or a choice of what to attack (you know several spells at the be-

ginning, and may, for all I know, pick up new spells as you progress). Time stands still while you are in the menu, so that attacks never become too sweaty.

Much of the adventuring feel is here - you start off with no weapons, but not far from the start, you'll be able to tackle a monster that is carrying a dagger, and you can pick up this once you've defeated it. Problems such as this abound, and while the complexity of full-blown arcade adventures won't be found here, there's quite enough to keep the player occupied.

All in all, *Master of Magic* is a good role-playing game. While the program is not in the same class as some of the more expensive offerings around at the moment, it's certainly an addictive romp through monster-infested and treasure-laden dungeons, and a jewel in the budget crown.

## Assorted nasties

**T**he year is medieval - and goblins, ghosts and witches rule the domain of all that is evil in the world of *Dragonhold*.

You play the part of a little animated character that goes on a long quest in search of the Elixir of Life - however, to stop the noble fellow from completing his task is a selection of assorted nasties.

If you are a Dungeons and Dragons freak, then you will be at home with this game, as it has a similar feel. Your status window displays your current attributes, with the most important being *Endurance*; when this reaches zero, you've had it!

You move from screen to screen across the land, encountering beasts who may well try to kill you, the most annoying of which I found to be

the Vampire Bat which dogged me throughout. I found a crucifix and tried to use it on the thing only to find it had no effect. I took the object to a Vicar, who promptly mugged me.

I started getting on much better in the game when I started talking to characters - you'll find this gets you quite a bit of help one way and another.

Altogether, *Dragonhold* is a nice combination of arcade adventuring and conventional verb/noun fare. Highly recommended.

## Disaster to disaster

**A**fter Ego, the male version, proved curiously compulsive in the *Popular* office a couple of weeks back. Now Activision has released the female version and it's having the same effect.

*Alter Ego* is one of the Activision 'oddball' releases. You get to choose a personality, and then 'live' it through seven stages of life from babyhood to old age. By choosing 'experiences' from a series of on-screen icons, and reacting to them in a number of different ways, the program analyses your personality and charts your progress through life.

The female version uses many of the scenarios from its male counterpart (some slightly adapted) so is not substantially different. But at least it doesn't assume you're going to spend your life tied to the kitchen sink.

The program probably appeals most to the egomaniac side of one's nature. Getting the chance to do all the things you wouldn't in real life - writing a novel, marrying eight

times, skipping school and all sorts of wild sexual experiences (the program carries a parental warning notice) - is not only huge fun, but also seems to bring out the rebellious streak in everyone playing it.

There is a generous helping of (very American) humour running through the game, but don't expect your 'life' to be all happiness and derring-do. Much of what happens will depend on how your personality has shaped according to the program in previous stages: my latest 'life' lurched from disaster to disaster. Widowed at an early age, my adopted children inexplicably disappeared in the disc changeover from stage six to stage seven, and I died a cocaine addict and alcoholic.

## Aladdin's cave explored

Tony Kendle offers some tips for Artic's arcade adventure, and promises undying support for Commodore 64 owners

A short while ago Artic released two new programs for the Amstrad CPC machines, *Obsidian* and *Aladdin's Cave*, unusual in that for once they weren't just conversions of established Spectrum games, but actually made an attempt to exploit the features of the Amstrad.

Of the two the most successful to my mind was *Obsidian* - the gameplay was challenging with fast action, devilous puzzles to complement your reflex skills and the graphics were excellent. Set in a space age craft, a clever combination of colours and design created an almost 3D metallic quality that only Virgin's *Strangeloop* and Mikro-Gen's *Equinox* have been able to match.

*Aladdin's Cave* was more standard fare, principally just a platform game of few locations. However it did have one or two intriguing qualities and new touches that made it enjoyable and I found myself returning many times for another go. One particularly novel feature is that your character has the power to be able to change into a variety of different beasts in order to best tackle the obstacles presented. Now, after a decent interval of time, I feel it would not be unfair to release the tips for this one.

There are five characters that you can assume in all. Only the Man shape can be used to collect objects, only the Monkey shape can climb poles, the Parrot can fly, the Dolphin can swim and the Genie can float left or right.

You automatically turn into the Dolphin when in water, but the other characters are selected by pressing the Down and Jump keys simultaneously. Up and Jump together will turn you back into a man.

The games rooms are laid out as follows for those of you who wish to make a map:

**Menagerie** - where you must collect fruit for the monkey. Exits are to the top right for the Chandler's room and bottom right to the Technocave.

**Chandler's** - collect fish for the Dolphin. Exits top left to Menagerie, bottom left for Technocave and bottom right to Cellar.

**Technocave** - collect iron bars to help you in the Precipice and the Guard Room. Exits are bottom left - Chandler's, mid left - Menagerie, bottom right Aladdin's Cave.

**Cellar** - collect the feather for the Parrot. Exits are top right to the Chandler's, bottom left to Passage and roof to the Aladdin's Cave.

**Aladdin's Cave** - collect diamonds for the

Genie. Exits are bottom left to Technocave, bottom to Cellar and top right to Precipice.

**Passage** - bottom left to Cellar and bottom right to Chamber.

**Chamber** - bottom left to Passage, roof left to Geyser, roof right to Desert.

**Precipice** - top left to Aladdin's Cave, bottom right to River.

**River** - bottom left to Precipice, bottom right to Geyser.

**Geyser** - bottom left to River, top right to Desert, ground right to Chamber.

**Desert** - top left to Geyser, ground left to Chamber and bottom right to City.

routine also lets you see the name of each level of the game. Just type in the listing, rewind the game tape to the beginning and type RUN. Then follow the on-screen instructions. The routine should also work on the 664 and 6128 but I haven't tested it on these.

The Amstrad version of *Bounty Bob* was technically competent but completely flat and uninspired. The graphic charm and atmospheric colour schema of the original seems to have been abandoned and, even more of a pity, the special codes that allow access to different levels of the game also

**City** - collect the diamonds to bribe the guard. Exits are bottom left for the Desert and bottom right for the Inner City.

**Inner City** - exits are top left for City, top right for Guard Room and bottom right for Spell Chamber.

**Guard Room** - Collect the arrows to move the guard and kill the wizard. Exits are bottom left to the Inner City and bottom right to the Wizard's Lair.

**Spell Chamber** - Collect the spells to kill the wizard. Exits are top left to the Inner City and top right to the Wizard's Lair.

**Wizard's Lair** - the conclusion of the game. To kill the wizard you need both the spells and the arrows. Exits are top left to Guard Room and bottom left to the Spell Chamber.

Have fun, but I warn you it still won't be easy and I have yet to come near that wizard!

Staying with the Amstrad CPC for the moment, Stephen Hulley of Hemet Hempstead has written in with a routine that gives infinite lives on US Gold's *Bounty Bob Strikes Back*. Stephen writes, "The

seem to have been dropped.

This may be due to memory constraints but it is a stark lesson on how to turn a successful and entertaining program into just another platform game clone. Still, having said that, the layout of the various screens is, in some places, cunning to the point of being fiendish and I for one will find these extra lives extremely worthwhile.

Finally this week, here are a couple of pokes for the CBM 64 version of *Underworld* from a regular contributor Chris Eastwood of Witney. To get the tips to work in their present form you must have access to a reset switch, useful things and highly recommended to any Commodore owner who enjoys poking their games.

Load the game and reset it and then enter the following:

```
Poke 40537,141
Poke 34404,45
```

Sys 36209 to re-start the game.

These have the effect of giving you infinite lives and also disabling sprite to sprite collision respectively.

# Deep in space

Tony Bridge ventures into the unknown – and looks at a few of the new space operas

A couple of weeks ago, we saw some Commodore programs which were set around beaches or the sea. Probably the most fruitful area for adventure plots, though, is a little higher up in space, and after that introduction, it's no coincidence that the programs we're going to look at this week are space operas.

Mike Burley is the sum of the brains behind Starcrash Software Systems, whose first Survival Simulation for the Spectrum is now ready for your delight. *Starcrash* is Quil'd and text-only, but the text is, says the press release, "So rich that it comes as close as it possibly can to being an interactive novel, where the reader's immersion in the atmosphere and involvement in the situations which arise will give a sense of 'on the edge of your seat' participation".

Mike tells me that the adventure has taken 18 months to come to fruition, while the text is very loquacious (not necessarily the sign of a great novel), careless mistakes in spelling and grammar occur on just about every screen, and these detract a little from the overall impression. If you're thinking of writing an adventure, please take a little care over punctuation and spelling – such an easily-checked thing can make all the difference in an adventure and put the player in a receptive frame of mind.

Loading is accomplished via the "LOAD CODE" command (I spent half an hour just looking for that long-neglected "CODE" key!), but this bolies the fact that the simulation (for this is what Mike calls his adventure) is Quil'd. A very well-known little-screen (black and white) leads us to the first part of the game and the first screen of text. "You awake, the acrid stench of burning insulation heavy about you. Showers of incandescence spit and plume in hazy out of focus flurries of glowing, sparking snowflakes. Ever so slowly painfully Fuzzy memories lit elusively through the concussed synapses of your well shaken brain calls..." And on and on, for another two full screens. But at the end of it all comes the well-known phrase or saying "I await your command", and it's back to Quil'd-land to try to match words and phrases with those in the computer's memory.

*Starcrash* is, as I've pointed out, as

*Knight Tyme* from Mastertronic

much a simulation of survival on a space-going vessel (in this case the crashed *Lady Angela*) as it is an adventure, and this means that descriptions go into great detail in an attempt to create a tangible atmosphere. Most of the time this is successful, though the player is required to wade through reams of rather purple (and not very well spell-checked) prose. It's all very hi-tech while aboard your crashed spaceship, but once outside you'll find yourself in "Impenetrable Jungle, adventures for the use of Mk II".

### Juggling in the jungle

Getting out of the wreck is nicely done, being accomplished in a couple of ways, only one of which is the optimum method. As you can only carry four items at a time, there's quite a lot of juggling involved in getting the objects to their required position, once out of the ship, it proves difficult to get back in, so you must SEARCH and EXAMINE every location thoroughly.

The Jungle is pretty hostile, and death looms at every corner, just waiting for the unwary adventurer.

*Starcrash* is in two parts, the completion of the first part yielding a password to the

more difficult second, so there's a lot of adventure to be played in his location and object descriptions. Mike has used a lot of imagination and lifted the general tone of the game far above the usual Quil'd effort – there's a wonderful moment beneath the *Lady Angela* when the "carnage produced by the meeting of ship and jungle, jagged saw blades of metal and wood spear at you from every point of the compass".

Surrounded by the humid jungle, silence unbroken except for the dripping of moisture and the inexorable march of deadly killer ants you are put in mind of the oppressive atmosphere of *Alien* (and, strangely, *Thunderbirds*, though that series was not exactly a horror-house).

So there's a lot of adventuring to be done here, and the price of just £4.95 makes the program almost mandatory fare for Spectrum owners (and versions for other machines might be a good idea for the future, Mike).

Starcrash Software Systems is at 1 Walsingham Avenue, West Didsbury, Manchester M20 8WA.

*Starcrash* was written with a futuristic re-design character set, and so was our next adventure, *Rogue Camel* from Walrus.

Computing. This one concerns your efforts, as the sole saviour of the human race, to plant the Omega bomb in the required position to knock the comet off-course, thus missing the Earth.

That's the scenario, and the game is typical *Quill'd* stuff: very terse descriptions, sharply-drawn graphics, a few sound effects courtesy of The Patch, word-matching and so on. On the first screen appear three differently-coloured buttons, each of which has a different effect, and it doesn't take much for even the most novice adventurer to work out how to reveal the secret objects. Almost straight away, the usual *Quill'd*-hunger comes into play (why? it's been done a zillion times before, and it's all getting a bit b-o-r-i-n-g now please, no more hunger scenarios!)

I found it all a bit of a pain in the BXX; after the first few locations, one gets the feeling that what is to come is just more of the same. Although I would be the first to champion the *Quill'd* and the sterling work it has done in getting the efforts of non-programming adventure writers the attention of the general public, nevertheless, *Quill'd* adventures can become awfully boring sometimes, and one longs for the flexible approach of, for example, *Infocom*.

Although *Rogue Comet* has been well reviewed in other circles, I find the asking price of £4.95 just too much. When there are programs like *Knight Tyme Spell-*

*bound*, *Seabase Delta* and do on all available just £2 or £3, it's about time that prices were re-thought and re-adjusted.

Walrus Computing is 73 Landor Drive, Glynymor Park, Loughor, Swansea SA4 2GL.

From the *Quill'd* to *GAC*, and another opera in space for the Amstrad. This is from Maltale, a new London-based company which will introduce their catalogue, including *QOR*, at the Novotel Amstrad Show. *QOR* is the name of a planet, founded by rich space pirates and "the ruling classes". Eventually, the pirates ousted the nobles, one of whose exiled number Zaucu, is returning to the planet bent on revenge. You, as Jo, a special agent of the Supreme Universe Command, must accompany him and turn the situation to your own advantage. The background scenario is very confused, with vague hints of vast empires in space in the manner of many SF authors of the 50s and 60s.

## Lost in space

Maltale has, unfortunately, missed the opportunity to present Jo, like Level 9's Kim, as an androgyne - he's very firmly referred to as male.

The storyline proceeds quite well, starting on board the space vessel, you have a limited number of moves before you land and you must then explore the landscape of *QOR*. The graphics are very well drawn,

hi-tech when on the ship, pastoral on *QOR*, and eerie when that is required. But the graphics and story are all that I find interesting in this adventure: *GAC*, even more than *The Quill'd*, has to be very carefully programmed, and author Steve Baker has left many errors untrapped. Screen layout is very haphazard, and essential commands such as Help and Examine are not recognised. A very idiosyncratic terminology is used throughout - what to make of this gem of a location description, for example "... along the main cabin corridor to these and a dead end ...". These what? and the "o" is used along with abbreviations like "mo" and "ho" as well as newly-invented words like "zoo-zoom" and awfully feeble in-jokes ("Why is this called the Galley, there aren't any Gals here" being one of the more outrageous attempts) to batter the player into bewilderment.

An awful lot of work needs to be done on this one before I could recommend you invest in it; I don't have a price for *QOR*, though I'm sure that it will be too much, whatever it is.

May I ask software companies to please play-test your programs thoroughly (not just ask the kids next door to have a look) before asking the public to part with their hard-earned cash?

Maltale Services is 88 Benerly Rd, London SW11 6DU.

# C FOR YOURSELF

- This book is an ideal companion either as a practical introduction to the C language or as an aid to the quick development of a wide range of applications.
- The theme of the book is data-handling, and methods of programming data-handling routines in C. Topics covered include control routines and menus, interactive data entry and text editing, screen format and form generation, error handling, useful data structures, sorting (both in memory and on disk), indexing and retrieval. Full testing routines are included for all the programs in the book.

**Bits and pieces – how to get more from your printer with new ideas**

#### VIII

**The popular printer guide – a selection of sub-£500 machines to choose from**

#### XI

**The Citizen Two-Colour printer – small is beautiful for CBM owners**

The printer is one of the most important peripherals you can buy for your micro. It's the only way to produce permanent copies of data which don't rely on the micro itself when you need to re-examine them.

Rather than just giving you a list of suggested purchases – though you will find a popular printer guide on page VIII – we've tried to use this supplement to give you ideas on how you can make more use of your printer, and what you can expect to see in the years to come.

Our recent reader survey showed that 70% of you thought a printer was the first peripheral to buy.

Laser printing, desktop publishing, interlacing, budget printers, and money-saving ideas are all covered this week. We hope that you'll get some ideas, and start to use your printer more as a creative tool rather than just a listing machine! ◀

## One mag per desk

PETER WORLOCK EXAMINES THE DESKTOP PUBLISHING CONCEPT: PUTTING YOUR PRINTER TO WORK PRODUCING YOUR OWN 'MAGAZINES'

Desktop publishing is the buzz phrase of the year in computing circles. And it's odd that such a booming subject should owe its success to Apple's Macintosh – hardly the world's most popular computer.

The idea of using a personal computer to create magazines, brochures, reports, posters and so on did not start with the Mac. Software programs that allowed you to mix graphics and different sizes of text have been around for years. The Macintosh made the breakthrough by being the first micro to offer different text sizes and styles, together with high-resolution graphics, as standard features of the machine. In other words, it was a natural for desktop publishing.

But it required another breakthrough of sorts to allow the boom to start. It came in the form of Apple's Laserwriter, arguably the best computer printer available. What makes the Laserwriter so great (apart from the £5,000 price tag) is the fact that it is a powerful computer in its own right, with a 68000 processor, 500k of Rom and 1.5 megabytes of Ram, and it can produce up to eight pages a minute with a resolution of

300 dots per inch. In comparison most dot-matrix printers produce a resolution of less than 100 dots per inch.

This means that the Macintosh with the

## Editor

### MIRRORSOFT

Welcome to the world of personal publishing on your BBC Micro!  
**FLEET STREET EDITOR** gives you everything you need to produce professional-looking printed materials – in one package!

**Just £39.95 including VAT!**

#### A QUICK TOUR ROUND THE DEPARTMENTS

Each Fleet Street Editor page is constructed as a series of panels, with up to 8 panels per A4 page. Here's where you construct those panels:

**GRAPHICS LIBRARY**  
2000, about 400 pieces of ready-made art – illustrations, symbols, calligraphy, pictures, which can be incorporated into your own work.

**STUDIO**  
Where you modify existing art from the Library to create your own. All the graphics in the Library were created here.

**COPYDESK**  
Input your text here, using either the proprietary word processor or existing Visio or Wordwise files, and watch it wrap automatically round your graphics. Use different fonts, too.

**PAGE MAKE-UP**  
Before the format for a page is printed, select it from the page layout panels; your own page layout panels are provided ready-made for your own page layout.

**PREVIEW AND PRINT**  
Programs to reduce, experiment with, and save a complete page layout, select appropriate output devices, or print your page layout directly to a printer.

**ADMINISTRATION**  
Set up the program to suit your system configuration, format disks, integrate graphics from our Mode 4 programs, and further manipulate Fleet Street Editor files.

"FLEET STREET EDITOR is THE package for anyone with access to a BBC Micro who wants to produce printed materials that include graphics... The Graphics Library is a marvellous idea... The Studio is a really creative area with all the tools you need... Without a doubt, this is a wonderfully powerful and flexible package... FLEET STREET EDITOR has been cleverly conceived and brilliantly executed."

*Dave Fletcher, Educational Computing*

**Mirrorsoft**

Laserwriter can produce pages that look very much like those in commercially produced magazines. But even without the Laserwriter, the Mac remains the best desktop publisher around. There are currently three programs available - **MacPublisher**, the cheapest at under £100; **ReadySetGo**, at about £120; and **Pagemaker** for about £400. As you go up the price range the programs become easier/faster/more flexible.

The examples shown here were created with ReadySetGo and printed on the Apple Imagewriter, a dot-matrix printer. A sample Laserwriter page is included for comparison.

Although you don't need to buy a Laserwriter (you can send your discs to a printer who will output your work on to a Laserwriter - much cheaper), the Macintosh desktop publishing system is beyond the means of most readers. However, the Mac's features will gradually become available on other computers - the Atari ST is a good bet. When that happens we can all become publishing tycoons.

In the meantime, publishing packages for the more familiar home computers continue to appear. The best-known so far are **Fleet Street Editor** from Mirrosoft, and **Pagemaker** from AMS, designed for use with the AmX mouse.

Both packages are available at the moment only for the BBC B, but both will be available for the Amstrad from July, and **Fleet Street** for the Atari 520 ST from August, and PCW 8256 from October.

**Fleet Street Editor** is described as "the first of a new generation of one-stop publishing packages". Divided into six different sections - studio, graphics library, copydesk, page make-up, preview and administration - **Fleet Street Editor** is designed to reflect the method by which real papers are put together.

The ring-bound manual is divided into sections covering the different departments, and includes a section on printing methods which gives you some ideas of the problems faced by journalists and printer in the days before computerisation!

The **Graphics Library** section is a file of images which can be used on your page. There are around 400 images, including illustrations, symbols and cartoons, and a selection of "fancy" alphabets which can be used to create "banner" headlines. Sports, computers, music, maps, heraldry, caricatures, animals, astrological signs and Christmas images are just a few of the subjects covered, and there are further library disks planned

## Panels

Panels from the graphics library are loaded into the **Studio** section of the program, where they can be edited to your taste. Alternatively, you can create your own graphics from scratch, using several **Pen**, **Ink**, **Brush**, **Copy**, **Reflect**, **Reverse**, **Enlarge**, **Reduce**, **Fill**, **Rubber-band** and **Align** functions. It's very similar to conventional

art packages, but without the colour functions.

After creating your images with graphics and large text, you go to the **Copydesk** to enter your "body copy". The **Copydesk** is a simple wordprocessor, which can use **View** or **Wordwise** files. There are four single-height and six double-height fonts available. After defining your text area you can enter text using a variety of

justification and word-wrapping options.

**Page Make-up** is the next section, where you pull all the text and graphics panels you have created into one display area, and space them out as you want them to appear on the page. In the **Preview** and **Print** department, you can examine the finished page and send it to the printer.

The final department, **Administration**, is not, as you may suspect from the title an excuse to put your feet up and have a cup of tea, but the area in which disk formatting, graphics mode transfer, printer drivers and other utilities are dealt with.

Don't forget, though, that with **Fleet Street Editor**, and other publishing packages, the story doesn't really end when you have produced your finished document. For a start, it takes around ten minutes to

produce a page of finished print at the highest possible resolution, so the idea of running off several hundred copies is a bit daunting. Better by far to use a photocopier. Various useful tips on photocopying, as well as lithography, stencil and binding are included in the **Fleet Street Editor** manual.

## Concept

**Fleet Street Editor** is the first of what will be several desk-top publishing packages for home micros. This article has been intended to give you some idea what the concept is about, rather than to review particular programs in depth.

The best way to learn about desktop publishing is to try it for yourself - like the computer printer itself, you have to experience what it can do for you before all the applications become obvious.

Laser technology could make home printers fast, powerful and silent if it weren't for the price. Chris Jenkins looks to the future

# Look out for the laser

While dot-matrix and thermal printers have become so cheap that few computer users are unable to afford them, business users can enjoy the benefits of much more powerful and sophisticated machines. These include daisywheel printers which offer very high quality and interchangeable type-faces, and, at the top end of the market, the laser printer. But is it possible that the price of laser technology will come down to home user levels?

## Apple

Laser printer technology is perhaps most familiar through machines such as the Apple LaserWriter, which, in combination with the Macintosh, forms a complete "desktop publishing" system. Indeed, Apple would claim to have invented the whole desktop publishing concept.

However, the Mac/LaserWrite system still costs around £7,000, so the facilities it offers are not really available to the amateur. Paul Smith, MD of Electronic Printing Systems, thinks that this might change soon.

EPS is in the forefront of laser printer technology, and Paul Smith is well aware of the possibilities of the "budget" market. At the moment EPS sells hardware and software to a market composed of about 25% mainframe users, and 75% PC users. A typical product is the EPS 1000, which at £4,995 is within the price-bracket of most

medium-sized companies with heavy photocopying requirements.

Yes, that read PHOTOCOPY - because the laser printer is based on photocopier technology, and the EPS 1000 will function as a photocopier as well as a printer. The EPS 1000 is a highly-volume desktop machine. In the laser printer market this means a 10 page per minute device, about the same size (and physically similar to) a photocopier, at 27 x 21 inches.

The EPS 1000 offers RS-232 and Centronics interfaces, and so can be used with most popular PC's including IBM, Wang, DEC, TI, HP and so on. It features landscape or portrait printing, margin set, tab, alternative fonts, shadowprint, underline, justification, variable line spacing, subscript and superscript, line drawing, and a resolution of 300 dots per inch horizontal and vertical.

## Silence

Until you have seen the output of a laser printer you cannot really imagine how much better it can be than the product of even the best daisywheel. The added advantage of laser, of course, is that it can mix fonts, combine text and graphics, print up to around 48 point-size text, and, not least, operate in almost total silence!

At the moment EPS's Paul Smith can only see one major obstacle to this sort of technology coming within the home-user

price range. "The laser printer is based on much the same technology as the photocopier, and photocopiers have not dropped below £600-£700 because of the basic cost of the 'engine'. The price of this is stuck at around \$900, and until there's an OEM (Original Equipment Manufacturer) who can offer the 'engine' (the actual laser device to which the manufacturer adds the RAM, ROM and operating system) at a lower price, laser printers will be high-priced."

This situation is, hopefully, going to change when the demand for better quality printers makes high-volume sales of laser printers economical.

## Volume

Paul Smith predicts that within two to three years we may see laser printers at around £1,200-£1,300 which will produce 4 pages per minute, and will beat the quality of the present-day inkjet devices such as the sub-£1,000 Hewlett Packard Thinkjet, which can offer colour facilities, but cannot compete on speed or resolution with the laser.

Perhaps we will see some high-volume sales outlets - such as, perhaps, Amstrad - adopting the concept of laser printing within the next couple of years. If so, it may not be long before the current crop of noisy, inky, tardy printers are replaced by silent, speedy, powerful printers at affordable prices. ◀

# Pick yourself a printer

The Popular Computing Printer Guide is intended to help you choose the right printer for your needs. We've set a limit of £500 but bear in mind that you may need to spend extra to get an appropriate interface for your micro.

## THE SUNSET VIDEO DIGITISER

Price: £126.50p inc. VAT  
£1.50p p&p

### DESCRIPTION OF DIGITISER

The SUNSET professional digitiser is for use with the Spectrum 48K.

The video digitiser consists of a compact plug-in interface attached to the Spectrum and a set of software.

It is fully compatible with Microdrive units and allows you to transfer any stationary video picture onto your computer screen.

### USES

If you are writing your own games, this is for you. This system will put professional digitised pictures into your games directly from your posters or video film.

Create superb visual effects by taking a stored digitised picture, and running it through a spectrum drawing program.

Use it for scientific analysis.  
It can be used for promotional purposes.

### OTHER FEATURES

On screen picture signal analyser.  
All settings fully software controlled.  
Location of Digitised picture, is adjustable within incoming picture.  
Save and retrieve high resolution 256 x 192 x 4 bit picture for later analysis in your own program.

### TECHNICAL DESCRIPTION

The digitiser will operate with any 625 line composite video output (e.g. as from video camera, or video recorder on still frame). Digitises a full 256 x 192 x 4 bit picture. Displays this on your computer screen. Automatic adjustment of levels for best use of incoming video signal. The selection of shade and grey scale levels, can be made after digitising to achieve the best picture. Pictures may be dumped to cassette or microdrive for use in your own programs, or with one of the spectrum drawing programs. Fully menu driven and very simple to use. Supplied with a comprehensive manual. Amstrad version available soon.

► Dust cover. To keep your computer and Saga keyboard clean. £4.95  
► Centronics interface. To drive your printer. £34.95

# Printer plotting

If your greatest worry is that the cost of continually replacing printer ribbons is bringing your company to its knees, there's a solution which – though it sounds expensive – should be a worthwhile investment.

The **Inker**, from Applied Technology, can save businesses a packet simply by re-inking old fabric ribbons. The idea is based on the fact that fabric ribbons run out of ink long before they are too worn to use – but hammering an ink-starved ribbon is the quickest way to wear it out.

Applied Technology is the UK distributor of the American Inker, and the company's own offices use the product to save a fortune on ribbons. The Inker consists of an ink reservoir and a drive shaft, with a mounting adaptor which can be chosen to cope with all kinds of ribbons; Epson, Olivetti, Hewlett/Packard, DEC and so on.

The savings which can be made in offices which might have anything up to twenty printers are astounding – one Health Service branch apparently managed to save

£11,000 per year by using The Inker.

An added advantage is that Applied Technology can supply blank ribbons, and coloured inks in five varieties, so that you can customise your printer output to suit your needs.

Only really heavy printer users are likely to find The Inker profitable, since it costs £195 + VAT. But for businesses which spend a fortune on replacing ribbons which could well serve for years, The Inker represents a clever money-saving method. ◀

**Applied Technology, FREEPOST MI 135, Stockton-on-Tees, Cleveland, 0642-672268.**

Turn your printer to a whole new application with the **Underware Transfer Ribbon** from Banbury Business Computers. If you are fed up with listings, bored with word processing and tired of art packages, how about making T-shirts?

The Underware Transfer Ribbon, developed by the American Diversions Corp, allows design to be printed out on normal printer paper, then ironed down on to a T-shirt. At the moment the Epson version only is available, but Banbury are hoping to make Canon, Kaga, and other makes available.

Any screen image, using hi-res, low-res or text, can be prepared on your machine, then flipped over to produce a mirror-image for printing (if you have appropriate art software). The design is then ironed onto the shirt – polyester works best, while 100% cotton shirts tend to provide a less washable image.

The black only ribbon costs £12, while for £19 you can get a set of coloured pens using the same special ink, to hand-colour your screen dumped design.

For quick, cheap, "disposable" T-shirt designs for events such as shows, sports days, open days, or whatever, the Underware Transfer system seems to be another ingenious application for the humble home computer and printer. ◀

**Banbury Business Computers, 3 Schofields Way, Bloxham, Banbury, Oxon, 0295 720812.**

## NEW IDEAS FOR MAKING THE MOST OF YOUR COMPUTER PRINTING SYSTEM

Users of the Amstrad PCW machines, who require more facilities than those provided by the printer supplied with the system, will be interested in two bundling deals offered by Wildings.

The Amstrad PCW 8256 is being offered with either a Brother IIR10, or a Silver Reed EXPD 500 daisywheel printer. The printers cost £199.95, while the cables and driving software, which includes New Star's New Word processor and a spelling checker, costs £149.95. Both the printers are standard Centronics devices, and the prices include VAT. ◀

**Wildings Office Equipment, 303 High Holborn, London WC1, 01-405 9104.**

If space is at a premium in your home computer set-up, one thing you can do without is the problem of where to put a stack of printer paper.

Now PW Engineering has come up with a paper management system which solves most of the problems in one go.

The hardware is produced in sturdy sheet steel, finished in beige acrylic – particularly suited to the BBC computer for which the system was first designed. It consists of a

base plate on which the printer sits at an angle designed to allow the user to examine the print-out as it appears, a set of legs and a removable rear paper tray.

There's a combined cable protector and paper shield to prevent paper becoming entangled with your mains and computer cables, and the system is available in two sizes: for 80 column dot matrix printers at £34.75 plus VAT, or for larger daisywheel printers at £43.44 plus VAT. ◀

**PW Engineering, Churchill Road, Bicester, Oxon, 0869 253226.**

If you need new ideas on how to use your printer, and a useful reference guide to control codes and word processing, you might like to look out for *Getting the most from your Printer* by J W Penfold.

Published by Babani, this 84 page booklet costs £2.95, and is aimed at owners of all the popular home computers and printers. Sections include an explanation of ASCII, control codes, sending codes to the printer, dealing with features such as bold and emphasised printing, line feeding, density modes and so on.

The section on word processors covers some popular packages such as Quill and Visawrite. ◀

# Sensational Citizen Printer Offer

The incredible Citizen two-colour dot matrix printer!

Thanks to a super deal we can offer you this highly advanced, high quality printer at the low, low price of £49.99!

You can make more of your Commodore with the CITIZEN printer. If you have a VIC-20, C64, C16, Plus-4, C128 or C128D, you'll be expanding into word and data processing in no time at all.

This top notch printer from CITIZEN — famous for hi-tech watches and electronic office products — is packed with some really stunning features.

To obtain your Citizen printer go along to your local store or in the event of difficulty complete the coupon below, enclosing payment for £49.99 plus £2.50 p&p. But hurry, stocks are limited!

- Compatible with Commodore VIC-20, C64, C16, Plus-4, C128 and C128D Home Computers.
- Helical-driven print head — as used on expensive printers.
- Seven-wire dot matrix head.
- Uses STANDARD plain paper roll
- Uses STANDARD two-colour typewriter ribbons.
- Responds to Epson control codes in dot addressable graphic mode with single and multi-line printing
- Prints Commodore graphics and inverse characters.
- Programmable line spacing and expanded print capability.

## £49.99!

COMMODORE COMPATIBLE

In case of difficulty, use this DIRECT ORDER coupon.

Please send me... CITIZEN Printers at £52.49 each, including postage and packing, at a total cost of £

# Two colours better?

COMMODORE MICRO OWNERS CAN'T AFFORD TO IGNORE THE £50 CITIZEN TWO-COLOUR PRINTER, SAYS CHRIS JENKINS

The sheer bulk of most dot-matrix printers, along with the not inconsiderable cost, is enough to dissuade many potential purchasers from making the investment. If your home set-up is limited to a small area, the problems of fitting in a printer, with all its attendant wiring and paper stacks, can be just too much hassle.

Commodore computer owners now have the perfect solution, in the form of the excellent Citizen 2-Colour Commodore Printer.

Priced at an incredibly low £49.95, the Citizen is deceptively small and unobtrusive. At first sight, the natural assumption would be that it was some form of plotter, similar to the Commodore 1520, or maybe a thermal paper printer. But nothing could be further from the truth; it's a full function dot-matrix device, which, although it can only print on 2½" "til-roll" paper, is incredibly efficient and useful.

## Serial

Measuring only 240 × 176 × 81 mm, and weighing in at 2kg, the Citizen is so small that it will fit on the most cluttered desk (and I should know!). It's mains powered – none of the worries over power failure associated with battery devices – and comes with a built-in Commodore serial interface for complete compatibility with the Vic 20, CBM 64, SX-64, C128, Plus/4 and C16.

Controls are kept to a minimum. On the back are the ON/OFF switch and the serial port (just the one). On the front, three LED's: red for ALARM, in case of paper jamming or data error, and green for ON LINE/OFF LINE and POWER; and three

buttons, LINE FEED, SELECT (online) and Deselect (offline). That's all there is to it. The paper "til roll" mounts on two arms which clip to the back of the printer, and feeds through under the cover and across the print head. There's a tensioning arm to keep the paper taut.

## Addresses

In operation, the Citizen is like most other Commodore-compatible printers, except for the two-colour capability. The manual, which is surprisingly full and clear considering the low-end market at which this device is presumably aimed, explains all the business of device numbers, addresses, secondary addresses and control codes needed to operate any Commodore printer.

Several useful extras can be accessed by using simple CHR\$ messages. The line spacing, normally set to 5.5 mm, can be altered using a secondary address of 6, and you can select either the upper/lower case or upper case/graphics mode using SA 7. Most usefully, the width of the characters printed can be doubled using CHR\$(1), changing the matrix size used from the normal 7 × 6 to 7 × 12. There's also an INVERSE printing function.

Printing in red is achieved using CHR\$(20). You can't mix red and black on one line. The red/black ribbon used is a standard size which shouldn't be difficult to obtain when you need a replacement.

Bit image programming allows you to define your own graphics characters using simple Basic commands, and there are also commands for paging, carriage return and line feed. The print produced is remarkably

clear, although obviously limited to 40 column width. This can be an advantage if you are printing out program listings, since the printout appears in exactly the same format as the listing on the screen.

With a print speed of 65 characters per second (48 lines per minute in 40-column mode), the citizen is by no means slow.

While it might

90 LIST

lack the refinements of some printers – multiple serial ports, fancy paper feeds, compatibility with a wide range of non-Commodore machines, and the like – the Citizen is absolutely ideal for producing listings, programming notes, financial figures, and so on. It wouldn't do for word processing because of the paper size; but just for the hell of it, I tried it with Paperclip software and got faultless results.

At this price, any Commodore micro owner without a printer could hardly afford to ignore the Citizen. In fact, even if you already own a printer, wouldn't you like to go one better than the Joneses and own two? The Citizen Two-Colour Printer makes it a distinctly interesting proposition. ◀

**Product:** Citizen Two-Colour Printer.

## Logical and systematical

Ken Garroch takes a look at the learning possibilities of Logo

**L**OGO was designed by Seymour Papert and his colleagues at the Massachusetts Institute of Technology, as a computer language aimed mainly at school children ■ help them to learn to think logically and systematically.

Its main feature ■ Turtle Graphics, used as the graphic output. The turtle is usually ■ small triangle which is moved around the screen, although most Logos also have facilities to use a real 'live' turtle on a piece of paper on the classroom floor. The commands available, to start with, are very simple and fairly few. For example, ■ move the turtle ■ a square, the following sequence would be executed:

```
FD 10
RT 90
FD 10
RT 90
FD 10
RT 90
FD 10
RT 90
FD 10
RT 90
FD 10
RT 90
(FD = Forward RT = Right Turn)
```

This may seem a little tedious. Fortunately, there is structure built into the language ■ the forms of *TO* and *REPEAT*. So, a shorter version of square would be:

```
TO square
REPEAT 4 [FD 10 RT 90]
END
```

The *TO* structure ■ used to define words in a verb type manner. Once defined, square can simply be typed in to make the turtle draw a square. *REPEAT* ■ pretty obvious, it says repeat the next sequence a specified number of times. To give square different sizes, a variable could be introduced.

```
MAKE "side 10
TO square
REPEAT 4 [FD side RT 90]
END
```

The language of turtle graphics generally follows this simple style, allowing words to be made up of other words, ■■.

```
TOPatt
REPEAT 60 [square RT 6]
END
```

which will produce a pretty pattern. The idea is to enable children ■ develop some idea of geometry by experimentation. For instance, once a square has been defined, a hexagon is simple, just change the angle from 90 to 60 degrees and up the number of repetitions to six. From here, a circle is but one step, along with the ideas of infinity and approximations.

All of this may sound easy, or complicated, depending on your point of view. However, the main idea is ■ use the language and develop at your own speed. Once the ideas of structure have been taken in, Logo allows the manipulation of

words, numbers, and symbols as in most other languages but, in a different way.

In the early days of artificial intelligence, one language that came to the fore was Lisp (Literally thousands of parentheses). This allowed the manipulation of information as a series of lists

(ABCD) is a list ■ letters with A at the head, and BCD as the tail. In turn A may have a list attached ■ known as a property list

### Logo and Lisp

Seymour Papert was working at MIT in the artificial intelligence laboratory where Lisp has its roots and so it is not surprising that Logo and Lisp have quite a few similarities. In fact, early versions of Logo were written ■ Lisp and apart from the turtle graphics, Logo is very similar ■ style and structure.

All information is treated as a list whether it be numbers or words, so:

```
[This is a list]
is a list of words and
[12 32 46]
```

is a list of numbers. To extract items from a list the commands *ITEM* and *FIRST* can be used, so:

```
FIRST [This is a list]
returns This
ITEM 3 [This is a list]
returns a
```

The actual commands vary from version to version. In the main those used here are general and may need alteration to work with one of the common versions such as Dr Logo from Digital Research (as bundled with some of the Amstrad machines).

Being able ■ manipulate data in list format brings us back ■ the main idea of Logo which is ■ teach structure. Everything in the world can be defined as belonging ■ a set or list. Many things

Simple Turtle Graphics

come ■ pairs (shoes, arms legs, etc), others such as apples, pears can be grouped in different ways. A pound of apples may contain four, but apples can also be said to be part of the set of fruit.

In Logo, these concepts can easily be represented as the lists:

```
MAKE 'apples [apple1 apple2 apple3
apple4]
MAKE 'fruit [apples oranges pears
grapes]
MAKE 'diet [fruit water veg]
```

The structure of the diet can hence be broken down.

Logo has data structuring implicitly built in, unlike most other computer languages, where allowing one object ■ relate to another is a matter of defining special structures to hold the information. In Basic, it is almost impossible to do this in a way that is easy to understand. In everyday objects, however laying everything out in sets with their relations implied in their titles is as natural as breathing. The other main feature of Logo is how programs are written.

### Minor parts

Taking the idea of lists, and expanding the idea of defining words to do things as well as mean them (Verbs and Nouns), pro-

Advanced Turtle Graphics

grams are written as a collection of small sections that perform minor parts of the whole. This idea of splitting up a program into smaller, more manageable parts is applicable to all programming and all problems and, perhaps, a desirable way of thinking.

All these technicalities may lead you to think that as a teaching language (or environment), nothing definite is learned when using Logo. For instance, there is no learning by rote, no geography, history, etc. All of which is true except when you take into account the circumstances under which Logo can be taught. Logo programs need some information to work with and, after all, most subjects are mainly about details and procedures, all of which can be included in Logo programs.

### Concept learning

Now that the Amstrad 664 and 6128 have become widely available, more people will be coming into contact with Logo. It has been available on machines like the Apple II, BBC, and RML for quite a while, but unfortunately, it has not caught on. This may be due to the misunderstanding that computers are really only suitable for children (and adults) over the age of 12.

Logo is not a computer language for the training of future programmers (although it gives a better grounding than most other languages); it is a world waiting to be

explored like an adventure game. It has all the primitive words and commands available, all that has to be done is work them into something, learning the concepts of structure and geometry as you go. ■ is ideally suited to younger children who are just beginning to learn the basics of reading and writing.

As has been said, there are number a versions available, the most common being Dr Logo. This will run on most CP/M systems that provide graphics output. Unfortunately, it is very slow, a fault with nearly every implementation I've seen. The turtle graphics take a while to generate when compared to other computer graphics systems such as those provided from most Basics.

There is not very much standardisation between the various versions, different words are used for different things, leading to confusion. However, the basic turtle graphics instructions are usually the same, it is the extensions that are non-standard. Unfortunately, the same cannot be said for the list processing commands, and when going from one version to another, a lot of time is spent rooting around in the manual to find out exactly the word needed to do a particular job.

Logo is a much misunderstood language, which accounts, perhaps, for its lack of popularity. It is not so much a programming tool as are other languages. It is a learning tool.

## Logo Buyers Guide

**Program** Turtle Graphics Micro  
**BBC/Electron Price** £16.80 **Supplier** Acornsoft, Fullbourne Rd,  
Cherry Hinton, Cambridgeshire.  
Tel: 0223 245200.

**Program Logo Micro Commodore 64 Price £34.95 Supplier**  
Commodore UK, 1 Hunters Rd,  
Weldon Trading Estate, Corby,  
Northamptonshire. Tel: 0536  
205555

**Program Logo Graphics Inter-**  
**preter Micro Commodore 64**  
**Price** £7.95 **Supplier** Kuma, 12  
Horseshore Park, Pangbourne,  
Berks. Tel: 07357 4335.

**Program Snail Logo Micro Spectrum Price £9.95 Supplier CP Software, 15 Dispatch Rd, London N19. Tel: 01-272 2918.**

**Program** Logo Micro Spectrum  
**Price** £39.95 **Supplier** Sinclair  
Research, Milton Hall, Cam-  
bridge. Tel: 0233 86266.

## ANCIENT & MODERN

Unit 111 (Rear), Washington Road, West Wiltz Trading Estate, Westbury, Wiltshire

[illegible]

All prices inc. Vat and A.B.R. Overseas please add 15p per kg. Thousands of more in stock. **Flies** and **IAK** for full list (clay machine, Chiquen) POs payable to **Racquet and Modern, Unit 111 (Rear), Washington Road, West With Trading Estate, Westbury, Wilt.** **PITCHES**

## SCROLLER

by Chris Gibson

This short machine code program allows the user to input a message (up to 255 characters long) which will then be scrolled at the bottom of a Mode 7 screen under 6502 interrupts. This means that any Basic program can be run at the same time without affecting the scrolling. Thus the program could be used as part of a title sheet or a game.

Just type in the program and type *Run*. The screen will clear and the message will begin to scroll. To stop the scrolling type *Call Disable* - typing *Call Enable* will resume the scrolling.

The way the program works is to store each individual character in the string *M\$*

in a reserved data bank called *Bank* (Lines 350-390). The computer then sets the interval timer to the value held in the memory locations called *!Speed*. This must be a negative number as the timer increments it by one every hundredth of a second.

When the timer becomes zero an interrupt occurs and the computer jumps to the routine (labelled *Rout*). The status of the computer is stored on to the stack (Line 110) and the scroll is carried out (Lines 110 to 130). The timer is reset (Lines 160-200) and the computer status is restored (Line 150). The computer is then allowed to carry on with its normal functions.

# Programming: Amstrad

## SOUND

by Brian Cadge

This week sees the second and final helping of listing for the Sound Designer program we started last week. As explained before, the utility is fully icon driven and very easy to use.

Files are loaded into the sound designer by selecting the *Load* option. Any envelope

not included in the file being loaded will not be affected - therefore files can be merged into the designer from various different files if required.

Selecting the *Disc* icon (which will only operate if you have a disc drive connected), will produce the same menu as for

tape, allowing loading and saving of files on disc. An additional option is *Directory*, which will display the filenames of all *Env* files on the disc.

The penultimate icon shows a fat cross 'X' - selecting this allows you to clear the entire current envelope settings. Select

'Yes' to go ahead, or 'No' to cancel the command. Clearing the envelope wipes out the volume graph and resets the vibrator settings. Only the current envelope is cleared, all others remain unaffected.

The final icon shows a left pointing arrow, this is used for deleting the last section of the current volume envelope entered on to the graph. If no sections have been entered then the command is ignored.

Attempting to add more than five sections on to the volume graph will produce an error message and will be ignored, as will attempting to add a section that goes 'backwards' in time.

A little experimentation with this program can create some quite impressive results which, when combined into your own programs, could have your Amstrad

sounding like a small orchestra (maybe)

For those interested in the workings of the program, the various subroutines and key sections of code have been fully commented. The small section of machine code at the start of the program is used to produce the small arrow which moves in response to your joystick; you will find it produces a smooth and flicker free pointer. The routine exits to Basic when the joystick fire button is pressed.

Owners of an AMX Mouse for their Amstrad may like to know that the program will work equally well with this, rather than a joystick, without modification - you do not need to load any other software first!

Whenever a new volume envelope section is added, the program automatically works out the 'best fit' line which will produce the correct volume change over

the required time. It is only limited by the Amstrad's sound hardware.

The usual technique is used for checking for the presence of a disc system. This involves setting an *On Error* trap and calling the *LDisc* command. If this command exists then no error will occur and a disc system is present. If it does not exist then an 'Unknown command' error will be caught and the program will note that no disc system is present and default to tape.

All sound designer files are simple Ascii files which contain Basic compatible *Env* and *Ent* commands on separate lines starting at Line 500 in steps of ten. The program checks for syntax errors when loading in a file and will abandon the load if any are noted - this will only occur if you attempt to load in files which have not been produced by the Sound Designer.

## QL TRAP

by Simon Goodwin

**S**inclair SuperBasic is a powerful and flexible programming language, but it lacks some facilities, including a mechanism to 'trap' unexpected errors. In this article we provide a new command to banish errors associated with file and device handling, and reveal a simple programming trick that makes the error in expression message a thing of the past.

Other Basic interpreters allow an *On Error Goto* statement, or something similar, which diverts the computer to a certain line when an error occurs. Late versions of the QL recognise a *When Error* command which resembles *On Error Goto*, but this has a number of snags.

*When Error* only works on versions of the QL from JS onwards. This means that you can't use it in programs which are intended to run on any QL - most British machines belong to versions AH or JM, which do not allow the new commands. Secondly, *When Error* is an undocumented feature of the QL. Sinclair didn't explain the command in the QL's documentation, so you have to use it by trial and error. Finally, the implementation of *When Error* on the JS and MG QLs is far from bug-free. This combination of factors makes it little more than a curiosity.

In this article we present an alternative way of checking for errors, in the form of a new SuperBasic function, *Status%*, which will work on all versions of QL. The function lets you check the validity of file and advice names from within a program, avoiding errors such as *in use*, *not found*, *already exists* and *bad name*.

### Status report

*Status%* is a function which expects a single string parameter. The string should be the name of a QL device, followed by parameters (if any) or a file name.

The function analyses the string and

out whether or not it starts with the name of a device on the current QL. Any parameters of the name are then checked (file names, or extra information, as in *seriEQ*). Finally the function attempts to open a channel to communicate with the device specified. If successful the channel is closed and any file which has been generated en route is deleted.

*Status%* returns an integer (whole number) which indicates the degree of success it had in performing these operations. The possible values are shown in the table.

The function can cope with any device linked into the QL's QDOS operating-system - including add-ons - so you can use it on a basic QL, secure in the knowledge that it will also work with floppy discs, modems, parallel printers and so on.

The following command indicates that the file 'Supercharge' exists on floppy disc number 1:

```
Print Status%("1p1_supercharge")
- 8
```

### The program

The code for *Status%* occupies only 112 bytes. It links itself into SuperBasic, so you can use the function in any Basic program once it has been loaded - you can treat it just like one of the built-in functions.

The listing consists of a simple Basic loader which reserves space for the command and *Pokes* it into memory. Type it in then *Run*. The *Call* command in Line 210 links the new code into SuperBasic. Once the message *Status% Loaded*, has been printed you can delete the Basic - it is only needed to set up the code in reserved memory. If you accidentally mis-type some of the data the computer will print an appropriate message. Correct the error and re-run the program.

### Trick arithmetic

*Status%* is very useful, but it can only trap errors associated with files and devices. Programs can often be made to crash if text is entered when a number is required, and *Status%* cannot help with this problem. Luckily a simple programming trick can be used to get around this. If your program contains the command *Input X*, the QL will read any sequence of characters from the keyboard until *Enter* is pressed. The computer then tries to evaluate the characters as if they were a number. If the characters are not numeric the program stops with the report *error in expression*. Luckily it is possible to get around this problem, in most cases, with a

single extra statement. The solution is to read the characters as a string at first, so that they can be checked within your program, rather than by the QL system: *Input Temp\$X- "0" & Temp\$*, for instance.

We now use the string variable *Temp\$* as a temporary store for the characters. The digit '0' is tacked on to the front of the string before it is copied into *X*, the numeric variable. If the string was numeric, the extra zero at the start will have no effect on the value - for example, 125 and 0125 represent the same value. If the string was not numeric, *X* takes the value zero, since

Value returned	Meaning
0 or more	The device exists, and is not busy: a file with the name specified (if any) does not yet exist. The parameters (if any) are valid
-3 or -6	The device name and parameters are valid, but the QL has insufficient free space to open a new channel to the device.
-7	There is no device with the specified name on this QL.
8	A file with the name specified exists on the device specified
9	Either the device specified exists, but it is already in use and no other task may use it until the present one has finished, or the file specified is in the process of being written.
-11	The device is 'full'
-12	The device name is valid, but the file name or parameters are not.
-16	The medium (disc, cartridge etc) cannot be accessed because it is faulty, or has been changed while files were still open

Table of values returned by the *Status%* function

the QL stops evaluating as soon as it finds a non-numeric character. In either case there is no error.

This is a useful trick, but it does not allow you to distinguish between a 'real' value zero and one that indicates an error. In most cases this won't matter, but if need be, you can filter out real zero values by comparing *Temp\$* with "0", immediately after the *Input*. If the strings match you can set *X* to zero immediately, and jump past any code that might otherwise reject it.

There are a few other special cases to be checked for. If the user types a capital or small letter 'E' you'll still get an error, because the QL expects an 'exponent' after and 'E'; a number '0E' is illegal where '1E6' is fine. Very big numbers - such as 1E700 - also cause problems.

Finally, the QL only allows a digit, or nothing, after a decimal point, so you can fool it by typing in two full stops. Practice it is ready to check for these cases and you can often get by without bothering about them, and still have your programs fairly well error trapped.

# Programming: C64

# GRAPHICS EXTENSION

by C Woods

24K for Basic programs.

To use Graphics, type in Program One exactly as it is printed and save it. Once safely on disk or tape, type *Run*. If there are any errors in the *Data*, the program should point them out to you. Once it reaches the end (when it prints "OK") save it again, this one being the final copy. Any previous copies can be deleted.

Now type *New* which will remove the Basic loader program but leave the machine code intact. The new commands are now active.

The screen is divided into 320 columns by 200 rows (64,000 pixels) each of which can be defined as a background or foreground colour. Each pixel is referenced by an *x* (0-319) and *y* (0-199) coordinate.

The colours are now defined in blocks of 8x8 pixels, each block having a background and foreground colour. These blocks from now on will be referred to as attributes and are specified by *x* (0-39), and *y* (0-24) coordinates.

The commands are all prefixed by *Sys* 49152, eg:- *Sys* 49152,P,100,50 plots a point at 100,50. The nine commands are as follows:-

**G**-Enter Graphics mode

**T**-Return to Text mode.

**C, b, f**-Clear the graphics screen (either foreground or background (as set by the last *D* command) and set the

background to colour *B* and the foreground to colour *F*.

**P,x,y**-Draw a line from the coordinates (*x,y*), of length *l* and *m* a direction indicated by *d*, *d* - direction. 0 - Up, 1 - Right, 2 - Down, 3 - Left.

**D, c**-If *c* is 1 then *P* plots a point in the foreground colour and *c* clears the screen to the background colour. If *c* is 0 then these are the opposite way around.

**A, x, y, b, f**-Set the Attribute at coordinates *x, y* to the background and foreground colours *b* and *f* respectively. The *x* and *y* coordinates are in the range 0-39 and 0-24 respectively, unlike the other commands.

**M**-Move Basic to \$4000 (16384). This command followed by *New* will move Basic above the Hires screen. This should be typed in before using programs greater than 6K (including variables). I would suggest that it is always used at the start of a session.

**V**-Dump all the simple variables (ie, not arrays) the text screen. The foreground and background colours referred to earlier have the following

**G**raphics is a machine code routine which allows access to high resolution graphics from Basic. Nine new commands are added to plot points, draw lines, change colours etc.

The program consists of 1140 bytes machine code, residing at \$C000 (49152) which means it is untouchable by Basic or the Operating System. The high resolution screen sits at \$2000 (8192), mainly due to inadequacies of the VIC chip. Consequently, for programs larger than 6K (\$0800 - \$2000), Basic has to be moved to \$4000 above the screen. Even so, this still allows

codes:

- 0 Black
- 1 White
- 2 Red
- 3 Cyan
- 4 Purple
- 5 Green
- 6 Blue
- 7 Yellow
- 8 Orange
- 9 Brown
- 10 Light Red
- 11 Grey 1
- 12 Grey 2
- 13 Light Green
- 14 Light Blue
- 15 Grey 3

For example A, 10, 15, 0, 2 would set the attribute at (10, 15) to background black and foreground red.

Normally the colours come from locations at the top of memory but now they come from locations \$0400-\$0800 (1024-2048) which is the test screen. Due to this,

if you change any colours in hi-res and then return to the text screen, you will see garbage, to remove this just clear the screen.

Program Two is an example of what can be achieved; just let your imagination run wild and after a little experimentation you should get the hang of it.

## Menu Writer on Spectrum

by B E Ashley

This is a routine for Spectrum utility writers that find Menus a tedium. It centralises the vertical text, highlights the title and checks the input.

Line 1120 restores Data line using variable Data

Lines 1130 - 1140 Print Menu heading in Bright

Lines 1150 - 1170 insert blank lines for vertical lab.

Lines 1180 - 1210 print Menu options & selection number

Line 1220 prints selection request again in Bright

Line 1240 checks for valid selection

List 2 is for reference. Load it to print a sample menu. Any further menus simply require three lines similar to List 2.

The program as written will evenly space out eight selections clearly add further Menus to increase

List 1.

```

## Hi-res Print on CBM 128

by Stephen Hardcastle

Here's a short subroutine which enables you to print a standard bit-map graphics screen (Graphic Mode 1) onto a CBM 1526 printer. The subroutine may be included in any program provided the names of variables used in the main program don't clash

To test that you have typed the subroutine in correctly, you could enter one of the graphics programs from the system guide (page 8-13 is the best in my manual). Type in the subroutine and save it, then enter and run a graphics program. The hires graphics screen will remain intact providing you don't use a *Graphic Clr* command

Next just load and then run the subroutine with *Gosub 2000* if all is well then the screen will go blank and the printer come to life. The printing takes a long time but the result with a good ribbon is worth waiting for

For any one with a CBM MPS 602 printer there's a good chance this program will work as it stands

```
2000 FAST
2010 OPEN 4,4,0
2020 OPEN 5,4,5
2030 OPEN 6,4,6
2040 PRINT#5,CHR$(28)
2050 FOR Y = 0 TO 24
2060 FOR X = 0 TO 38
2070 BYTE = 8192 + (X*8) + (Y*320)
2080 AS = "" : BIT = 7
2090 FOR I = 0 TO 7
2100 DEC = 128 : COUNT = 0
2110 FOR J = BYTE TO BYTE + 7
2120 IF (PEEK(J) AND 21BIT) = 21BIT THEN COUNT = COUNT + DEC
2130 DEC = DEC/2
2140 NEXT J
2150 AS = AS + CHR$(COUNT)
2160 BIT = BIT-1
2170 NEXT I
2180 PRINT#5,AS
2190 FOR L = 0 TO 11
2200 PRINT#4," "
2210 NEXT L
2220 PRINT#4,CHR$(254)+CHR$(141)
2230 NEXT X
2240 PRINT#4,CHR$(13))
2250 NEXT Y
2260 PRINT#6,CHR$(36)
2270 CLOSE5
2280 CLOSE5
2290 CLOSE4
2300 SLOW
2310 RETURN
```

## Fractals on Amstrad

by Martin Thomas

Here is a short program for the Amstrad machines. When run it produces a stepped landscape that looks quite interesting

To be more technical it produces a three dimensional graph of a log function. If the expression  $\ln(2^2 \log(x-y))$  in Line 40 is replaced, another view is obtained. Examples include:

$\ln(2^2 \tan(x^2 y / 1100))$  or  $(2^2 \operatorname{Atn}(B^2 \sin(x^2 y / 1100))$

```
10 MODE 1
20 FOR Y=1 TO 40:PLOT X:10,0
30 FOR X=1 TO 40
40 DRAW(X+Y/20*10,0)INT(2*LOG(X*Y/20+Y/2+10)
50 NEXT X
```

## A musical education

Mark Jenkins looks at some new music packages for the C643 and Atari 520

Last week we looked at a couple of guitar tutor packages, omitting only to mention what machine they ran on — the C64 as it happens. This week another guitar tutor program for the same machine has turned up as part of a much more complex system marketed by Colleen under the name *Music Compendium*.

The *Compendium* has several sections including a Music Theory Tutor, Guitar Tutor, DID (sound), Chip Tutor, Playalong section, Drum Machine and Sound Creator. Good value for money for the price of one tape or disc, you may think.

The Music Theory section is in two parts, covering first the staff, treble and bass clefs, notes on the staff, ledger lines, bar lines and repeats, and then note values, rest values, time signatures, ties, pickup notes and accidentals. If you have to learn music theory there are worse ways, and the Colleen package persuades the C64 to give you musical examples as you go along. It's hardly the same as having an open book in front of you though, let alone a human teacher.

Still, it should be possible to pickup some basic terminology to enable you to go in to the Guitar Tutor. This simply allows you to punch in any major, minor, seventh or minor seventh chord on a grid, and shows you what fingers to use and where to play the chord on a guitar fingerboard. The computer sounds the chord in a plunky sort of voice simultaneously and you can tune up each string of your guitar to the computer before starting.

The SID chip tutor is a little odd, covering most of the Pokes necessary to squeeze sounds from the C64 chip, but omitting the random and envelope settings and referring only to the user's manual for any hint as to how to produce musical tuning. When there's a fab book around like *Electronic Music on the Commodore 64* (author Mark Jenkins, published by Sunshine Publications, and where's this month's royalty statement?) it seems more fun to work through the SID chip more comprehensively yourself.

The playalong section is good fun though — it produces boogie, country, disco or waltz backings in any key, controllable from a Music Maker keyboard if you have

one, or a choice of three tempos.

The drum machine is similarly good fun, allowing you to enter 2- or 10-beat patterns of up to three voices and chain them into songs. Forty bars can be created and edited and there's a good selection of swishy percussion noises.

Bars and patterns can be loaded from and saved to disc and any bar may be used as many times as you like in a pattern, and can be copied or moved within the pattern.

The last part of the *Compendium*, the sound creator, has three distinct sections: the creator, combiner and effects master. As these are a little complex (with the ability to create music and sound effects for your own programs) we'll take a look at them next time, pausing only to remark that the Colleen package seems a good buy for those wanting a little musical education, for those who think they may be interested in music but aren't sure (remember it's not just about dots on a piece of paper) or for those who want to use their 64 as a basic accompaniment machine for other instruments. The whole *compendium* is available on a double-sided disc at a reasonable £29.95, and sections are also available individually.

You can contact Colleen at Bishop St,

Penygraig, CF40 1PQ or phone 0443-434846.

A little more upmarket now with the latest MIDI packages from Steinberg, which is launching a whole new range at the British Music Fair at Olympia from 1st-3rd August.

*Pro 24* is a 24-track MIDI sequencer for the Atari 520ST and 1040ST with 5,000 patterns, 200,000 events, up to 64th note quantise or real-time recording, individual

not and MIDI event editing, single step recording, insert, delete, cut, append, repeat, punch in and out and much more. For £165 it seems set to become the industry standard MIDI composer package.

*Pro-Creator* is an editor for the Yamaha FM synths which also has the capability of creating sounds randomly down to the name displayed on the synth's LCD. Cost

is £120 for the Atari version.

*Track Star* is an eight-track MIDI sequencer for beginners on the Commodore 64/128 which includes four sampled drum sounds of bass, snare, hi-hat and percussion. It has four demo songs and six demo rhythms, punch in and out, fast forward and rewind and many other facilities, and £70 including a MIDI interface.

The *Edit Kit* for Pro 16 composer files on the C64/128 has ten octave range and complete editing facilities down to the last note and MIDI or drum event. Cost is £30.

It's now possible to buy *Pro 16* for the C64/128 on an Eeprom with built-in interface for £177.50, and Steinberg also markets editor packages for synths from the Ensoniq Mirage Sampler to the Korg DW-6000. Contact OSC at 68 Wilsdon Way, Lyne Paddock, Kidlington, Oxford, OX5 67056.

We'll be looking at some of these products in more detail in the near future.

If you have any queries or tips for this column, please write to Mark Jenkins at *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP. Mark would also welcome examples of your own music on audio or program tape, or disc.

# Programming: Peek & Poke

## Keyboard query

Mark Griffith, of Cambridge, writes:

**Q** I am thinking of buying a microcomputer. Is there a keyboard with the Dvorak layout that I can buy to go with a PC?

**A** The Dvorak keyboard layout is used to enable touch typists to go faster. It has the same number of keys as a normal keyboard but with a different layout. The idea is to put the more commonly used keys in more convenient positions. In fact, the Dvorak keyboard is so similar to the normal keyboard that it may be just as easy to redefine the keys rather than invest in a new keyboard.

Superkey, from Borland (Altair Computers 041-226 4211 price £89.95) is a piece of software that will do this for you. It comes with the Dvorak layout as standard.

There are two other types of 'go faster' keyboards that you might like to consider, the Maltron, and the Velotype. Both use completely different keyboard styles from the norm. Velotype allows a number of keys to be pressed at once and is contoured to fit the hands, the Maltron is contoured, and has a special layout allowing the hands to be as still as possible.

## Amstrad INK

P Gray of Wirral Merseyside writes:

**Q** I recently purchased an Amstrad CPC 6128 micro computer and have been trying to come to terms with its Basic programming language. One thing that I am having a little trouble with is how the colours

are placed on to the screen, in particular, what INK, PEN, and PAPER do. Could you make it a little clearer?

**A** To be honest, I also had a little trouble with these commands since they are not explained very clearly in the manual.

After a bit of playing around, here is my understanding of how it works.

The Amstrad has 27 colours available of which a selection can be placed on the screen at any one time, depending on the screen mode. In mode 0 there can be 16, mode 1 has four, and

up, it can be used on the screen, either by PAPER, PEN, or graphic commands. So if ink 1 is set to blue, the command PEN 1 will cause anything written to the screen to appear there in blue. Paper works in the same way with the only oddity that the paper is defined as the cell within which the character appears.

If you want to change the colour of the screen, find out which ink is currently assigned to paper and alter the colour assigned to the ink.

To sum up, the computer has a palette of 27 colours, 15 of which can be assigned to inks,

The program, which is designed to draw a simple sine curve, stops with the following error message:

dot does not like [:x:a] as input in ...

Could you please explain this error and how this command should be used?

I would be grateful if you could also recommend the titles of one or two books which explain the language in detail.

**A** Your problem is one of levels. The dot command needs a list of two numbers as its input, ie, dot [10 20], OK. However, unlike computer languages such as Basic, the concept of variables is slightly different. What you are actually giving dot is the list [:x:a]. Logo does not immediately presume that you mean the values contained in x and a, it needs to go to the next level down so you have to tell it to evaluate the list [:x:a] into numbers. The command for this is list. Try the following:

```
make "x 10
make "a 20
dot list:x a
```

This has the effect of taking :x and :a and forming the list [10 20] which is what dot needs to work correctly. The working version of 'curve' is:

```
to curve
make "x 0
repeat 360 (make "a 90 * sin :x make
"x:x + 1 dot list:x a)
end
```

There is another example in the Amstrad manual using 'setcursor'. Logo is based on the artificial intelligence language Lisp and most of the list processing ideas (converting x a to [10 20]) is a list process) are the same.

It may be an idea to have a look in your local bookshop/library for books about Logo that that suit you but some titles that may be of use are: Seymour Papert, *Children Computers and Power Ideas* (Harvester Press, 16 Ship Street, Brighton, Sussex ISBN 0-71080-472-5); Tony Hasemer, *A Beginners Guide To Lisp* (Addison Wesley Publishing, ISBN 0-2021-14634-7), which gives all the basics behind list processing, relevant to advanced Logos; Harold Abelson, *Logo for the Apple II* (Byte/McGraw-Hill), one of the standard works on Logo for micros.

The Dvorak keyboard layout

mode has two. The colours that appear on the screen can be any from the 27 and are selected using the INK command.

The INK command can have up to three arguments INK N,C1,C2, the first of which specifies which of the 16 inks is to be assigned a colour. So the command INK 2,3 assigns red (colour) to ink 2 as flashing colours (alternating between red and blue).

Once the ink has been set

these inks are then used by the PEN, PAPER and graphic commands.

The program below demonstrates how graphics can use colours and switching of colours, at the ink stage, to create simple animation.

## Logo lists

Graeme Watkinson of Burntwood in Staffordshire, writes:

**Q** I own an Amstrad PCW 8256 and have been trying to use the DR Logo program supplied. I have managed to get right except that I cannot get the dot command to function using any of the variables in the program below:

```
to CURVE
make "x 0
repeat 360 (make "a 90 * sin :x make
"x:x + 1)
end
```

```
10 MODE 0
20 FOR T=0 TO 15
30 INK T,T
40 NEXT
50 C=0:REM C used to define the colour
60 FOR T=0 TO 200 STEP 4
70 C=C+1
80 C=C MOD 160 IS>1
90 DRPL 400-T,T,C
100 DRPL 400-T,400-T,C
110 DRPL T,400-T,C
120 DRPL T,T,C
130 NEXT
140 FOR T=15 TO 1 STEP -1
150 INK T,24
160 DRPL 400-T,24
170 INK T,0
180 NEXT
190 GOTO 140
```

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to *Kenn Garroch* and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke*, PCW, 12-13 Little Newport Street, London WC2R 3LD

## REWARDING OPPORTUNITIES WITH MIKRO-GEN

Following Mikro-Gen's move to new premises we now require additional 6502 programmers. If you believe your programming ability meets our high standard, please contact us by telephone or letter to the address below.

We also require finished programmes. Top payment or royalties given to software of suitable quality.

**Mikro-Gen, Unit 15, The Western Centre, Western Road,  
Bracknell, Berks. RG12 1RW. Telephone number (0344) 427317**

# New Releases

John Cook looks through this week's new arrivals

## Amstrad

**Program Colossus Chess 4 Type Strategy Micro PCW 8256/8512 Price £15.95 Supplier** CDS Software, Silver House, Silver St, Doncaster, S Yorkshire, DN1 1HL.

**Program Contamination Type Strategy Micro Amstrad Price** £9.95 (tape) £14.95 (disc) **Supplier** PSS, 452 Stoney Stanton Road, Coventry CV6 5DG.

It's a pity this pre-production version wasn't here a couple of weeks ago; everyone seemed to be down with the lurgi. If only we'd had *Contamination* then.

You've seen flight simulations, you've seen business simulations - but an epidemic simulation - that's a new one from the Ere Infomatique incidentally who are releasing their excellent games via PSS in this country.

In an *Andromeda Strain* type scenario, a constantly mutating virus has been brought to Earth via a space shot, and you are in control of a team of scientists trying to contain/eliminate the virus and its virulent offspring. It may sound a bit dodgy, but I found the game fascinating.

Admittedly, at present the game stretches my French to its equally dodgy limits but it goes something like this:

You are head of the World Health Organisation who are charged with attempting to stop the virus from killing everyone. You do this by developing anti-virus preparations in your computer controlled lab, then testing the potion for things like side effects - alternatively you can try them out on the population; if you feel lucky.

The other side of the operation is carried out on a world map, where you receive information about the virus's progress, etc. You can place restrictions on infected area, even nuke them if things get out of control, but the latter doesn't make you flavour of the month with the locals.

Naturally there's a lot more to it than that, but I think it's likely that this intriguing mix of puzzle and strategy is going to appeal to more than Amstrad owning Biochemists. The English version should be ready by late July.

**Program Meltdown Type Arcade Micro 464/664 Price** £8.95 **Supplier** Alligata, 1 Orange St, Sheffield, S1 4WD.

**Program Night Gunner Type Arcade Micro Amstrad Price** £7.95 (tape) £13.95 (disc) **Supplier** Digital Intergration, Watchmoor Trade Centre, Watchmoor Road, Camberley, Surrey GU15 3AJ.

**Program Max Headroom Type Arcade Micro Amstrad Price** £9.95 **Supplier** Quicksilver, Liberty House, 222 Regent St, London W1.

**Program Core Type Arcade Micro Amstrad Price** £8.95 **Supplier** A&F, Liberty House, 222 Regent St, London W1.

**Program Nick Faldo plays the Open Type Strategy Micro Amstrad Price** £9.95 **Supplier** Quicksilver, Liberty House, 222 Regent St, London W1.

**Program ADAM Type Utility Micro Amstrad Price** £24.95 (tape) £29.95 (disc) **Supplier** Audio-genic, 12 Chiltern Enterprise Centre, Station Rd, Theale, Berkshire, RG7 4AA.

## Amstrad 6128

**Program Masterfile III Type Utility Micro 6128 Price** £39.95 **Supplier** Cambell Systems, 57 Trap's Hill, Loughton, Essex, IG10 1TD.

**Program Meltdown Type Arcade Micro Amstrad 6128 Price** £14.95 **Supplier** Alligata Software, 1 Orange St, Sheffield, S1 4WD.

What's this? A dedicated 6128 game. And I'll say one thing for it - it's big.

Three levels of 64 rooms with six 'mini games' on each one - each level linked by another game, the whole thing ending with you having to write a program in a new computer language, to control the core of a nuclear reactor out of control. Phew! Thank heavens for the save option.

But luckily, size is not the only thing going for *Meltdown*. The 3-D graphics are constructed in a similar mode to *Get Dexter* - very colourful and cartoon like. The action is a good mixture of puzzle solving

Pick of the week

**Program Batman Type Arcade Micro PCW256/PCWB256 Price** £14.95 **Supplier** Ocean Software, 6 Central Street, Manchester M2 5NS.

No, it's not a misprint. *Batman*, the fabby, highly acclaimed, etc. arcade adventure is now to be found running on the boring old Amstrad Personal Computer Word Processor - but why did it have to happen this week?

As the mighty Joe Sunshine handed me my 8512 (complete with timelocked ball and chain) I couldn't help but notice his particularly wide serene smile - the one normally seen on the face of Christian Scientists, or aged Aunts half way through their third gin & orange.

Personal productivity. This was no computer to play games with. This machine was going to make me a better person; a more productive person. This piece of hardware was going to change my life.

I accepted the gift with a tug of the forelock and a weak grin, resigning myself to a future of gloom, only to be interrupted by the odd game of computer chess. And then came *Batman*!

## Batman

can assure you, never has the arrival of a Super-hero been greeted with such whoops of joy.

I remembered the game as a great little *Knight Lore* derivative on the original machines and wondered curiously how it would convert to a text-only format. It was then that various jaws hit the floor. There it was. Detailed 3-D graphics. Wonderfully animated figures. Flendishly difficult puzzles.

Whoever said it would never run games wasn't reckoning on Jon Ritman and Bernie Drummond. This is just like the original (albeit extremely green) and all the more enjoyable for turning up somewhere unexpected. And of course, if they can do it - so can many others.

and zapping - with your venom being directed at cybermen types and flying saucers that seem to have taken over the complex.

With a reputed 180K worth of

code on the disc, merely on a bytes per pound spent this would be good value. Combined with the fact you've got a highly entertaining and original arcade adventure to boot, it looks like a winner.

A cut down version (two levels) is available on tape for 464/664 owners, but I expect 6128 owners to go for this in a big way.

## Atari

**Program Cloak of Death Type Adventure Micro Atari 400/800/130XE Price** £9.95 **Supplier** Bug-Byte, Liberty House, 222 Regent St, London W1.

**Program Questprobe Type Adventure Micro Atari 800/130 Price** £14.95 (disc only) **Supplier** US Gold, The Parkway Industrial Centre, Henneage St,

Birmingham, B7

## Atari ST

**Program Cornerman Type Utility Micro Atari ST Price** £29.95

**Program Mitem Type Utility Micro Atari ST Price** £29.95  
**Supplier** Microdeal, PO Box 68, St. Austell, Cornwall, PL25 4YB

**Program Utilities Type Utility Micro Atari ST Price** £39.95  
**Supplier** Microdeal, PO Box 68, St. Austell, Cornwall, PL25 4YB

## BBC and Electron

**Program Raid Over Moscow Type Arcade Micro BBC B Price** £9.95  
**Supplier** US Gold, Unit 10, The Parkway Industrial Centre, Birmingham B7 4LY

There's no doubt that this particular computer game can certainly be said to have made its mark on the world. In fact, I can't think of any other game that has raised the blood pressure of people playing.

The storm at launch was so great, that US Gold even

changed the name ■ *Raid* Well, it's now been 'born again' under the old title on the BBC

The war against the Red Peril gets off to a poor start with two errors in the first two pages of instructions. After half an hour or so, the controls were sorted out and the thing showed itself to be a fair conversion of the best selling multi-screen zapper.

Re any controversy this launch may re-start (I don't expect ILEA would like this run on its considerable number of BBC's, for example) if you don't like the politics, don't buy it (the ultimate capitalist sanction).

In any case, play it with your brain in neutral.

**Program Star Force 7 Type Arcade Micro BBC/Electron Price** 1.99  
**Supplier** Bug-Byte, Liberty House, 222 Regent St, London W1

**Program Questprobe Type Adventure Micro BBC/Electron Price** £7.95  
**Supplier** US Gold, Unit 10, The Parkway Industrial Centre, Heneage St, Birmingham, B7

## Commodore 64

**Program Rupert and the Ice Castle Type Arcade Micro Commodore 64 Price** £2.99  
**Supplier** Bug Byte, Liberty House, 222 Regent St, London W1

**Program Law of the West Type Adventure Micro Commodore 64 Price** £14.95 (disc) £9.95 (tape)  
**Supplier** US Gold, Unit 10, The Parkway Industrial Estate, Heneage St, Birmingham, B7

**Program Questprobe Type Adventure Micro Commodore 64 Price** £9.95 (tape) £14.95 (disc)  
**Supplier** US Gold, Unit 10, The Parkway Industrial Estate, Heneage St, Birmingham, B7

## C16/Plus 4

**Program Ace type Arcade Micro Plus4 Price** 9.99  
**Supplier** Cascade Games, 1-3 Haywre Cres, Harrogate, Yorkshire HG1 5BG

Things are looking up for the Plus4. Tape 3+1 last week (freeing the inbuilt software from the disc drive), *Mercenary* the week before - now *Ace* from Cascade.

*Ace* (Air Combat Emulator) saw life first on the Plus4's

little brother, the C16, and has come full circle (or should that be loop-the-loop) via the 64. And it looks good.

Very similar to the 64 version, this may not be a full blown simulator, but there's enough complexity to keep most armchair Squadron Leaders happy. Choose your weapon load according to your proposed target type (you get to zap planes, tanks and ships in this one), don't fly too fast with-

out your wheels down and it's scramble, scramble, scramble.

There's plenty of blasting and a reasonable element of strategy too as you repel all boarders with the aid of an optional co-pilot controlling the weapon systems. Another goodie.

## PCW 8256

**Program Colossus Chess 4 Type Strategy Micro PCW 8256/8512 Price** £15.95  
**Supplier** COS Software, Silver House, Silver St, Doncaster, S Yorkshire, DN1 1HL

## Spectrum

**Program Questprobe Type Adventure Micro Spectrum Price** £9.95  
**Supplier** US Gold, Unit 10, The Parkway Industrial Centre, Heneage St, Birmingham, B7

**Program Rupert and the Ice Palace Type Arcade Micro Spectrum Price** £2.99  
**Supplier** Bug-Byte, Liberty House, 222 Regent St, London W1

**Program The Dragon of Notacare Type Adventure Micro Spectrum Price** £2.20  
**Supplier** Microtech, 88 Whitley Spring Crescent, Osset, W Yorkshire, WF5 0HS

**Program Treasure Type Adventure Micro Spectrum Price** £2.20  
**Supplier** Microtech, 88 Whitley Spring Crescent, Osset Yorkshire, WF5 0HS

**Program Tantalus Type Arcade Micro Spectrum Price** £8.95  
**Supplier** Quicksilver, Liberty House, 222 Regent St, London W1R 7DB

If you cast your mind back a few months, Quicksilver produced a game called *Glass* - the general reaction to which was, 'great graphics, shame about the gameplay'. Now Paul Hargreaves has written another visual opus, *Tantalus*, and once again it's a case of donning the Foster Grants before loading.

There's no doubt about it, the graphics, one way or another are well - stunning, although I wouldn't recommend viewing after a hearty meal. Evidently Paul is not a Habitat fan - still, what about the game?

Lots of very small print on the cassette inlay about interstellar wars and mutants in the year 3027, but closer inspection reveals it to be a large zapper (1024 screens it says here) with some adventure elements thrown in.

A fair amount of play has suggested this isn't really my cup of tea - the aliens (all 48 different types, each well designed) just aren't vicious enough (as I speak there are 15 on screen, 14 not moving, with one aimlessly wandering around as I shelter in a quiet alcove) or perhaps it's because I have difficulty identifying with my on-screen persona - a Spike Punkold.

But there's no denying that a lot of effort has been put into the thing - and if you're an ardent mapper with a loathing of good interior design, there's a lot here that might interest you.

**Program Shape School 1 & 2 Type Educational Micro Spectrum Price** £3.99 each or £6.99 for both  
**Supplier** Jodan Software, 68 Dingleberry, Olney, Bucks, MK46 5ET

## QL

**Program TechniQL Type Utility Micro QL Price** £49.95  
**Supplier** Talent Computer Systems, Curran Building, 101 St James Rd, Glasgow, G4 0NS

# GET YOUR NAME ON THE

# LEADERBOARD

If you have ever bought another golf simulator – shoot yourself!  
If you are ever considering it – save yourself a bullet!  
ZZAP64

Quite honestly, leaderboard makes all other golf simulations look clumsy and antiquated in comparison.  
ZZAP64

This is the sports simulation of the year – if not the decade!  
ZZAP64

## And swing your way to a record round

Now you can become a golf pro and experience the thrill of having your name up on the "Leaderboard". With this amazingly realistic simulation you get a true perspective view of your golf game. As you play on different 18 hole courses on levels varying from amateur to touring professional you'll need skill concentration and control to come in under par.

**CBM 64/128** Coming soon for Spectrum and Amstrad

### Features:

- Choice of club, distance, type of shot (hook, slice, putting) and more
- Realistic Sound
- Practice Driving Range
- Joystick Controlled
- Multiple 18 Hole Golf Courses
- Automatic Scoring
